The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Uranium Mill Tailings Sites: UMTRA

There were nine uranium mill tailings sites in Colorado designated for cleanup under the Federal Uranium Mill Tailings Radiation Control Act (UMTRA). These nine sites, know commonly as UMTRA sites, were remediated jointly by the State of Colorado and the U.S. Department of Energy during the late 1980's and early 1990's. Mill tailings were removed from 8 of the mill sites and relocated in engineered disposal cells. A disposal cell is designed to encapsulate the material, reduce radon emanation, and prevent the movement of water through the material. At one site, Maybell, CO, the tailings were stabilized in-place at the mill site. After remediation of the tailings was completed, the State and DOE began to investigate the residual impacts to groundwater at the mill sites. The groundwater phase of the UMTRA program is on-going. This database was provided by the Colorado Department of Public Health and Environment in 2008.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Detail 1: From an old CDPHE list of locations where tank leaks were suspected and LUST Trust funds were used in an effort to identify the source. Often, the source was found nearby and was entered in the LUST database (now COSTIS).

Detail 2: This listing not entered into COSTIS back when CDPHE transferred responsibility for tank leaks to OPS. Few people at OPS know of this old CDPHE list, and any associated files are thought to have been disposed of or misplaced.

Detail 1: From an old CDPHE list of locations where tank leaks were suspected and LUST Trust funds were used in an effort to identify the source. Often, the source was found nearby and was entered in the LUST database (now COSTIS).
Detail 2: This listing not entered into COSTIS back when CDPHE transferred responsibility for tank leaks to OPS. Few people at OPS know of this old CDPHE list, and any associated files are thought to have been disposed of or misplaced.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List: NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jan 25, 2022

National Priority List - Proposed: PROPOSED NPL

Sites proposed - by the EPA, the state agency, or concerned citizens - for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jan 25, 2022

Deleted NPL: DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

SEMS List 8R Active Site Inventory: SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Feb 24, 2022

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Dec 30, 2021

Federal Institutional Controls- ICs: FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Uranium Mill Tailings Sites: UMTRA

There were nine uranium mill tailings sites in Colorado designated for cleanup under the Federal Uranium Mill Tailings Radiation Control Act (UMTRA). These nine sites, know commonly as UMTRA sites, were remediated jointly by the State of Colorado and the U.S. Department of Energy during the late 1980's and early 1990's. Mill tailings were removed from 8 of the mill sites and relocated in engineered disposal cells. A disposal cell is designed to encapsulate the material, reduce radon emanation, and prevent the movement of water through the material. At one site, Maybell, CO, the tailings were stabilized in-place at the mill site. After remediation of the tailings was completed, the State and DOE began to investigate the residual impacts to groundwater at the mill sites. The groundwater phase of the UMTRA program is on-going. This database was provided by the Colorado Department of Public Health and Environment in 2008.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

1. Introduction

The City and County of Broomfield is considering safety, capacity, and multimodal improvements along US 287 (and SH 128/120th Avenue) between the US 287/Midway Boulevard/Alter Street intersection on the west and the US 287/Lowell Boulevard intersection on the east (Figure 1). This project will plan for future improvements that will improve corridor safety, roadway capacity, and operations. The study will evaluate traffic congestion, safety, travel lane capacity needs, travel-time reliability, transit operations, transit options, and transit-related infrastructure improvements within the corridor to facilitate trip reliability and reduced delay for various modes of travel. As potential alternative designs that result from this study will likely utilize federal funds, the Colorado Department of Transportation (CDOT) is participating in the study, overseeing the existing conditions analysis and future alternatives development.

Pinyon Environmental, Inc. (Pinyon), is assessing the environmental constraints in the study area. The constraints analysis aims to be broad enough to encompass the variety of potential alternatives that the design team may end up developing for the corridor. This project will include coordination with CDOT to ensure that the study area and environmental scope of work will sufficiently inform the National Environmental Policy Act (NEPA) process for future design concepts. This report has been prepared to address existing conditions regarding biological resources and protected species in accordance with the following federal and state regulations or policies:

- **The United States Endangered Species Act (ESA):** Protects federally listed plant and animal species with the goal of ensuring their long-term survival. The United States. Fish and Wildlife Service (USFWS) administers these requirements.

- **The Colorado Non-game, Endangered, and Threatened Species Conservation Act:** Protects state-listed threatened (ST), state-listed endangered (SE), and state special concern species (SC) with the goal of ensuring their long-term survival. Colorado Parks and Wildlife (CPW) administers these requirements.

- **Black-tailed Prairie Dog (*Cynomys ludovicianus*) Policies:** In CDOT right-of-way (ROW), the applicable policies that will be followed are the 2009 *CDOT Impacted Black-tailed Prairie Dog Policy* and the *Black-tailed Prairie Dog Relocation Guidelines* (CDOT, 2009; CDOT, 2002).

- **City and County of Broomfield Policies for Prairie Dog Conservation Management:** developed to preserve populations of the black-tailed prairie dog and associated wildlife within the City and County of Broomfield while not placing undue constraints on property rights, private development rights, and use of City-owned lands to meet other societal needs (City and County of Broomfield, 2003).

- **Bald and Golden Eagle Protection Act (BGEPA):** Protects Bald Eagles (*Haliaeetus leucocephalus*) and Golden Eagles (*Aquila chrysaetos*). The USFWS administers these requirements.

- **Migratory Bird Treaty Act (MBTA):** Protects birds, their active nests, and their eggs (except for pigeons, starlings, and some other non-native birds). The USFWS administers these requirements.

- **Colorado Senate Bill 40 (SB 40):** Requires that state agencies obtain certification from CPW when the agency plans construction in any stream, stream bank, or tributary. Any portions of the project that could impact an SB 40 jurisdictional stream may require SB 40 Certification, including mitigation measures designed to improve fish and wildlife habitat.

- **Section 404 of the Clean Water Act:** Regulates waters of the United States (WOTUS), which include non-wetland waters and wetlands. Impacts to these features would require permitting through the United States Army Corps of Engineers (USACE).

- **Executive Order 11990 Protection of Wetlands:** The purpose of Executive Order 11990 is to "minimize the destruction, loss, or degradation of wetlands and to preserve and enhance the natural and beneficial values of wetlands." CDOT has wetland-specific requirements beyond what is required by the USACE, in order to comply with Executive Order 11990. A CDOT Wetland Finding report would be required if permanent wetland impacts exceed 500 square feet, or if temporary impacts exceed 1,000 square feet, regardless of whether the USACE has jurisdiction. This does not include impacts to non-wetland water areas. CDOT requires mitigation for all wetland impacts at a 1:1 ratio.

- **Noxious Weeds:** The Colorado Department of Agriculture (CDA) Noxious Weed Act of 2003 (CRS 35-5-101; CRS 35-5.5-101; Executive Order (EO) D-006-99) defines and prioritizes management objectives for state-designated noxious weeds. The CDA classifies noxious weed species into three categories: List A, List B, and List C. List A species are designated by the Commissioner of the CDA for eradication. List B species are those species that are managed to stop continued spread. List C species are weed species that are not required to be managed by local jurisdictions but are monitored to provide additional education and research (CDA, 2017).

2. Methods

Pinyon biologists Haley Stratton and Jeff Henderson visited the site on April 21 and 22, 2022, to assess the study area for biological resources. The weather during both site visits was clear and sunny, and the temperature ranged from 65°- 85° Fahrenheit. On April 22, 2022, there were wind gusts up to 50 miles per hour in the evening.

2.1 Study Area

Pinyon was provided with the boundaries where the maximum extent of alternative considerations are anticipated to occur. This area is further referred to in this report as the "study area."

2.2 Survey Parameters

Pinyon personnel surveyed the study area for biological resources by walking throughout the study area and recording the locations of sensitive habitat features. During the site visit, Pinyon used Collector for ArcGIS paired with a R1 Global Navigation Satellite System (GNSS) receiver to record relevant information. Notes and photographs were taken to record field conditions (Appendix A).

The following activities were completed during the site visit:

- General habitat conditions and land uses were noted. Dominant plant species and plant habitats were recorded.
- The study area was evaluated for protected species and their habitats, including:
    - Federally listed threatened and endangered species, as specified by the USFWS online Information for Planning and Consultation (IPaC) System (USFWS, 2022a).
    - State-listed endangered, threatened, and sensitive species, as specified by USGS quadrangle on the CPW and Colorado Natural Heritage Program (CNHP) websites.
    - Migratory birds.
- Potential SB 40 resources, including riparian vegetation, were evaluated in the field, and appropriate mapping was conducted.
- Non-wetland waters and wetlands were mapped and delineated in accordance with the 1987 U.S. Army Corps of Engineers (USACE) "Wetland Delineation Manual" and the 2010 Corps "Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Great Plains Region (Version 2.0)" (Environmental Laboratory, 1987; USACE, 2010). Wetland Determination Data Forms are included in Appendix B.
- Noxious weeds were documented.

3. Results

3.1 Habitat Description

3.1.1 Land Use

The study area consists primarily of the US 287 ROW and is surrounded by commercial and residential properties and transportation corridors. US 287 extends west to east through the study area and has heavy vehicle use. Given the presence of roadways, ditches, and surrounding developments, it is likely that some of the natural vegetation, soils, and hydrology within and near the study area have been altered by filling, grading, and improvement activities in the past.

3.1.2 General Habitat and Vegetation Description

The study area was composed primarily of roadside and mowed vegetation (Figure 2; Appendix A, Photos 1 and 2). Upland vegetation prevalent throughout the study area during the site visit included herbaceous species such as kochia (*Bassia scoparia*), smooth brome (*Bromus inermis*), and common sunflower (*Helianthus annuus*). Shrubs and trees were generally associated with landscaped residential and commercial areas.

The City Park Channel runs along the southern side of US 287 for a majority of the study area and fringe wetlands were identified along both banks in various locations. In addition, several unnamed roadside ditches and associated wetlands are located within the study area. Non-wetland waters and wetland features are further discussed in **Section 3.5**.

3.2 Threatened and Endangered Species

3.2.1 Federally Listed Species

Based on a review of the USFWS online IPaC System, there are federally listed species with the potential to occur in, or be impacted by, a project in this location (USFWS, 2022a). Of the listed species, three species are included because they occur downstream of the study area and could be impacted by projects that result in water depletions to the South Platte River or its tributaries: the pallid sturgeon (*Scaphirhynchus albus*), Piping Plover (*Charadrius melodus*), Whooping Crane (*Grus americana*), and western prairie fringed orchid (*Platanthera praeclara*). This project may have elements that could cause depletions to the South Platte River basin, including using water as a dust palliative. To address the effects water depletions may have on federally listed downstream species that depend on the river for their survival, CDOT, as a state agency, is participating in the South Platte Water Related Activities Program. CDOT is cooperating with the FHWA regarding depletions to the South Platte River or its tributaries. In response to the need for formal consultation for the water used from the South Platte basin, FHWA has prepared a Programmatic Biological Assessment (PBA) that estimates total water usage through 2023. The water used for this project will be reported to the USFWS at the year's end after the completion of the project as per the PBA. As water depletion impacts to the four downstream species have already undergone consultation with the USFWS under the PBA, these four species are not discussed further.

The habitat and distribution of each of the remaining species was reviewed, and the potential for occurrence for each species was assigned based on the conditions at the study area. Based on the habitat review, the remaining four federally listed species have no potential to occur in, or be affected by, the project (Table 3-1).

Table 3-1. Federally Listed Species and Their Potential to Occur in the Study Area

Common Name	Scientific Name	Federal Status	Habitat	Potential for Occurrence in the Study Area[1]
Mammals				
Canada lynx	*Lynx canadensis*	FT	Uneven-aged stands with relatively open canopies and well-developed understories of coniferous forests.	**None**. Suitable habitat does not occur in the study area.
Gray Wolf	*Canis lupus*	FE	A variety of biomes within North America including boreal forest, temperate deciduous forest, and temperate grassland.	**None**. Suitable habitat does not occur in the study area and the project is not located in a predator management program area (USFWS, 2022b).
Insects				
Monarch butterfly	*Danaus plexippus*	FC	Found within a variety of habitats that feature their obligate larval host plant, milkweed (*Asclepias* spp.).	**Low.** No milkweed was observed; however, monarch butterflies have a potential to migrate through the study area.
Plants				
Ute ladies'-tresses orchid	*Spiranthes diluvialis*	FT	Sub-irrigated alluvial soils along streams; open meadows on floodplains including riparian areas.	**None**. Suitable habitat does not occur in the study area. Although some associated plant species were noted, the density, composition, and location (e.g., mowed roadside habitat, channelized ditches, and stormwater features) of these plant communities lacked evidence of suitable habitat for the orchid.

FT = federally listed as threatened
FE = federally listed as endangered
FC = federally listed candidate

3.2.1 State-Listed and Special Concern Species

Based on a review of the CPW Threatened and Endangered List, CPW Species Activity Mapping data, and the CNHP Tracking List, there are ST, SE, and SC species with the potential to be impacted by work occurring in the USGS Lafayette, Colorado 7.5-Minute Quadrangle Map (CPW, 2022a; CPW, 2022b; CNHP, 2021; USGS 2022). Table 3-1 lists these species and summarizes the potential for each of the species to occur in the study area. State-listed species that are also federally listed are not included in Table 3-2, as they were previously discussed in Table 3-1.

Table 3-2. State-Listed Species and Their Potential to Occur in the Study Area

Common Name	Scientific Name	State Status	Habitat	Potential for Occurrence in the Study Area[1]
Mammals				
Black-tailed prairie dog	*Cynomys ludovicianus*	SC	Shortgrass or mixed-grass prairie.	**High.** Black-tailed prairie dogs were mapped within and adjacent to portions of the study area. See discussion in Section 3.2.1.1 below.
Preble's meadow jumping mouse	*Zapus hudsonius preblei*	FT	Occurs along Front Range of Colorado along permanent or intermittent streams in areas with herbaceous cover and adequate cover of shrubs and trees.	**None**. The study area is located in the USFWS Block Clearance Zone for PMJM (USFWS, 2021).
Birds				
Bald Eagle	*Haliaeetus leucocephalus*	SC	Open canopies with large, mature trees for perching and nesting. Prefer areas near open waters.	**Medium**. Suitable habitat including CPW-mapped communal roost area, winter range and winter forage occurs along Big Dry Creek, just east of the study area. See discussion in Section 3.2.1.2 below.
Burrowing Owl	*Athene cunicularia*	ST	Burrows in open grasslands, especially prairie, plains, and savanna.	**Medium.** Suitable habitat occurs within the black-tailed prairie dog areas in and adjacent to the study area. See discussion in Section 3.2.1.1 below.

Common Name	Scientific Name	State Status	Habitat	Potential for Occurrence in the Study Area[1]
Fish				
Common shiner	*Couesius plumbeus*	ST	Occurs in streams of moderate gradient with cool, clear water and gravelly bottoms shaded by brush or trees. This species is somewhat rare to the mainstem South Platte River; and is generally restricted to cool streams or spring ponds in the foothills (e.g., West Plum Creek).	**None**. Suitable habitat does not occur in the study area.
Reptiles				
Common Garter Snake	*Thanmophis sirtalis*	SC	Marshes, ponds, and the edges of streams; basically restricted to aquatic, wetland, and riparian habitats along the floodplains of streams; seldom found away from water or at isolated ponds. Active in shallow water and on land adjacent to water	**Low.** Poor habitat along City Park Channel and within the adjacent wetland (WL-7). Areas are heavily disturbed. See discussion in Section 3.2.1.3 below.
Amphibians				
Northern leopard frog	*Lithobates pipiens*	SC	Within or near permanent water with rooted aquatic vegetation. Commonly inhabit wet meadows and fields during the summer.	**Low.** Poor habitat along City Park Channel and within the adjacent wetland (WL-7). Areas are heavily disturbed. See discussion in Section 3.2.1.3 below.

FT = federally listed as threatened, ST = state listed as threatened, SC = state special concern species (not a statutory category).

[1]Based on a review of distribution maps from NatureServe Explorer online (NatureServe, 2022) and CPW Species Activity Mapping (CPW, 2022b), and tracking information from the CNHP Tracking Lists of threatened and endangered species (CNHP, 2021).

3.2.1.1 Black-tailed Prairie Dogs and Burrowing Owls

During the site visit, black-tailed prairie dog burrows were noted is several locations within and adjacent to portions of the western study area (Figure 2; Appendix A, Photo 3). Prairie dog towns also serve as suitable habitat for Burrowing Owls (*Athene cunicularia*), which are a ST species and also protected under the MBTA. No Burrowing Owls were observed during the site visit.

3.2.1.2 Bald Eagle

The Bald Eagle is a federal recovery species (was federally listed), a state-listed threatened species, and is also protected by BGEPA. It has a medium potential to occur in the study area. The study area is located adjacent to CPW-mapped winter range, winter forage, and communal roost habitat along Big Dry Creek to the east (Figure 2; CPW, 2022a). The closest CPW-mapped nest site is located approximately 2.75 miles south of the study area (CPW, 2022a). Bald Eagles may occasionally utilize the large trees in and adjacent to the study area; however, this is unlikely due to the busy nature of the US 287 roadway and the commercial and residential use surrounding the study area, and no nests were noted during the site visit.

3.2.1.3 Northern Leopard Frog and Common Garter Snake

The northern leopard frog and common garter snake are a state special concern species. Northern leopard frogs occur throughout much of Colorado at elevations from 3,500 to 11,000 ft, but the species populations have been declining due to a variety of water quality stressors. The species requires a broad range of habitats in close proximity due to its complicated life cycle. The common garter snake is generally found below 6,000 feet, and seldom found away from water or isolated ponds. Although there is a potential for these species to occur in along City Park Channel, this is unlikely due to the narrow range of habitats that occur along the channel and in the study area.

3.3 Migratory Birds

Few large trees were noted within the immediate study area. However, there were many large deciduous trees within 0.5-mile of the study area (within the CPW Recommended Buffer Zones for raptors) that could be used by nesting raptors (Figure 2; CPW, 2020). As mentioned above, the study area is located adjacent to CPW-mapped Bald Eagle winter range, winter forage, and communal roost along Big Dry Creek (Figure 2; CPW, 2022). The site visit was conducted during the nesting season, which can occur from February through August for raptors, and two active raptor nests were observed within 0.5-mile of the study area, along Nissan Creek in the east (Figure 2; Appendix A, Photos 4 and 5). One nest was occupied by a Red-tailed Hawk (*Buteo jamaicensis*) while the second nest was occupied by a Great Horned Owl (*Bubo virginianus*) with three hatchlings present in the nest.

Within the study area, small- to medium-sized trees, shrubs, saplings, tall grasses, and human-made structures could be used as nest sites for other (non-raptor) birds. There were several box culverts present where City Park Channel extends under arterial roadway crossings and the Wadsworth Parkway bridge structure over US 287. These box culverts and bridge structures provide suitable nesting habitat for migratory birds such as Cliff Swallows (*Petrochelidon pyrrhonota*) and Barn Swallows (*Hirundo rustica*) and several dozen nests were observed (Figure 2; Appendix A, Photo 6). One inactive stick nest was also observed north of the study area along Nissan Channel which appeared to be a former Magpie (*Pica hudsonia*) nest. No other migratory birds or their nests were observed within the study area during the time of the site visit.

As mentioned above Burrowing Owls are a ST species and are also protected under the MBTA. Black-tailed prairie dog burrows are present in the study area, which provide suitable nesting habitat for Burrowing Owls, although no Burrowing Owls were observed.

3.4 Senate Bill 40

Colorado SB 40 (33-5-101-107, CRS 1973 as amended) requires any agency of the state to obtain wildlife certification from the CPW when the agency plans construction in "...any stream or its bank or tributaries...." Although SB 40 emphasizes the protection of fishing waters, it acknowledges the need to protect and preserve all fish and wildlife resources associated with streams in Colorado. CDOT and CPW have a Memorandum of Agreement (CPW and CDOT, 2022) to clarify when SB 40 certification is required and to describe the procedures to be followed by CDOT in securing this certification.

Streams that meet one or more of the criteria as noted under the Memorandum of Agreement (Guidelines updated January 2022) fall under the jurisdiction of SB 40. These criteria include:

1. All perennial streams represented by solid blue lines on USGS 7.5-minute quadrangle or the National Hydrography Dataset.
2. Segments of ephemeral and intermittent streams providing flowing water beneficial to fish and wildlife.
3. Segments of streams at which 25 percent or more of the vegetation is comprised of riparian vegetation such as cottonwood, willow, alder, sedges, or other plants dependent on groundwater or overbank flooding. Such segments shall be within 300 feet upstream or downstream of the project. The 300-foot distance shall be measured along the length of the stream by valley length.
4. Segments of streams having wetlands present within 600 feet upstream or downstream of the project. The 600-foot distance shall be measured by valley length.

In addition to the above criteria, the following Special Rules also apply based on 2022 guideline updates:

A. Irrigation ditches are generally excluded from jurisdiction except when they are mapped or listed as a fishery by CPW.

B. Local government projects are excluded from SB 40 jurisdiction unless the project is on a state or federal highway and meets any of the criteria defined herein.

C. Roadside drainage ditches do not fall under SB 40 jurisdiction.

No drainages were identified in the study which meet the criteria above; therefore, the project is not subject to SB 40.

3.5 Waters of the United States

Nine non-wetland water features (Unnamed Drainages 1 through 7, Big Dry Creek Valley Ditch, and City Park Channel), and seven wetland areas/complexes (Wetland [WL]-1 through WL-7) were noted and mapped within the study area (Figure 2; Appendix A, Photos 7-12).

3.5.1 Non-wetland Waters

Unnamed Drainages 1 through 7 were all roadside ditches with minimal to no flow observed at the time of the site visit. Some were vegetated, whereas others were concrete-lined or consisted of a riprap bottom. Big Dry Creek Valley Ditch located in the western section of the study area just west of the SH 128 bridge over the Denver-Boulder Turnpike is agricultural ditch with minimal flow. City Park Channel located in the central and eastern section of the study area is a drainage ditch that parallels 120th Avenue to the south and flows beneath 120th Avenue just east of Lowell Boulevard with minimal flow. Details of these features are presented in Table 3-3 below.

3.5.2 Wetlands

There were seven wetland areas/complexes (WL-1 through WL-7) located within the study area (Figure 2). Some areas were individual wetlands, and some areas were wetland complexes made up several wetlands sharing similar hydrophytic vegetation, hydric soil, and wetland hydrology source. Overall, wetland quality were marginal as most were located within or adjacent to the roadside drainage ditches. The wetland areas were observed to be a palustrine emergent (PEM) wetlands primarily dominated by hydrophytic vegetation such as common spikerush (*Eleocharis palustris*), narrow-leaved cattail (*Typha angustifolia*), and softstem bulrush (*Schoenoplectus tabernaemontani*) (Cowardin et al., 1979; Appendix B). Salt grass, (*Distichlis spicata*), Torrey's rush (*Juncus torreyi*) and curly dock (*Rumex crispus*) were also noted in lesser amounts. Hydric soil indicators included a Depleted Matrix (F3), Hydrogen Sulfide (A4), and Loamy Mucky Mineral (F1). Hydrology indicators included Saturation (A3), Drainage Patterns (B10), Geomorphic Position (D2), and a passing FAC-Neutral Test (D5) (Appendix B).

3.6 Noxious Weeds

Noxious weeds present within the study area are typical of those located along roadsides and developed areas (Figure 2; Appendix A, Photos 13 and 14). List B and List C noxious weeds listed on the CDA Noxious Weed List were observed in the study area (CDA, 2017). Table 3-5 presents the common name, scientific name, state weed list, and CDA management goal for the study area. Figure 2 represents the distribution of these species.

4. Conclusions and Next Steps

Pinyon has completed this Biological Resources Report for the US287/120th Avenue Multimodal and Safety Study Project located in the City and County Broomfield, Colorado. The study area was assessed for the presence of biological resources including federally and state-listed species, migratory birds, riparian vegetation, WOTUS—including wetlands, noxious weeds, and shortgrass prairie. The project is currently reviewing potential alternatives and design is unknown. The following sections presents the conclusions and potential next steps once an alternative is identified, and design is known.

4.1 Threatened and Endangered Species

4.1.1 Federally Listed Species

The study area was assessed for the federally listed species with the potential to occur in the study area or be impacted by the project. Based on the lack of habitat present, the project would likely have ***no effect*** on FT or FE species. There is minimal habitat for the monarch butterfly (FC) throughout the study area; however, there are no Section 7 requirements for candite species. Therefore, no consultation is required regarding the monarch butterfly.

Environmental conditions may change over time, and it is recommended that an updated assessment of federally listed species be completed once the project advances and an alternative or design is known. If the project results in a ***no effect*** determination to federally listed species, then no further coordination with the USFWS would be required. If the project results in a ***may affect, not likely to adversely affect*** determination to federally listed species, then coordination with the USFWS would be required.

4.1.2 State-Listed Species

The study area was assessed for ST, SE, and SC species with the potential to be impacted by the project. The black-tailed prairie dog, Burrowing Owl, Bald Eagle, and northern leopard frog were identified as having the potential to occur in the study area.

4.1.2.1 Black-tailed Prairie Dogs and Burrowing Owls

Black-tailed prairie dogs were present within and adjacent to portions of the study area. The City and County of Broomfield's Policies for Prairie Dog Conservation and Management and CDOT's Prairie Dog Policy are intended to manage black-tailed prairie dogs (City and County of Broomfield, 2003; CDOT, 2009). The project should confirm the presence of black-tailed prairie dog populations once an alternative is chosen and design is known, and coordinate with both the City and County of Broomfield and CDOT for the management and conservation of potential impacts to black-tailed prairie dogs.

The black-tailed prairie dog colonies present in the immediate vicinity of the study area provide suitable habitat for Burrowing Owls (a SC species and protected under the MBTA). Burrowing owl surveys should be completed prior to construction activities in areas where black-tailed prairie dog colonies are noted during appropriate time frames. Surveys should be conducted in accordance with the CPW Recommended Survey Protocol and Actions to Protect Nesting Burrowing Owls (CPW, 20021) and the MBTA guidance discussed below.

4.1.2.2 Bald Eagles

The Bald Eagle has a moderate potential to occur in the study area or the surrounding area. The Bald Eagle is protected under the MBTA and the BGEPA. The CPW has recommended buffer zones and seasonal restrictions for the species:

- Nest sites: no surface occupancy within ¼ mile radius of an active nest. Seasonal restriction within ½ mile radius of active nest from October 15 through July 31.

- Winter night roosts: no surface occupancy within ¼ mile radius of an active winter night roost. Seasonal restrictions within ½ mile radius of an active winter night roost from November 15 through March 15.

Once an alternative is chosen, a survey for Bald Eagles should be completed. to the project should follow CPWs recommended buffers and seasonal restrictions and the MBTA guidance discussed below.

4.1.2.3 Northern Leopard Frog and Common Garter Snake

The northern leopard frog and common garter snake have a low potential for occurrence along the drainages within the study area. However, the potential for occurrence is unlikely since the both species requires a broader range of habitats. Therefore, the project would likely have no impacts on the SC northern leopard frog and common garter snake. However, it is recommended that an updated assessment of northern leopard frog and common garter snake habitat be completed once the project advances and an alternative is identified and design is known.

4.2 Migratory Birds

The site visit was conducted during the nesting season, which can occur from February through August for raptors, and two active raptor nests were observed within 0.5-mile of the study area. In addition, small- to medium-sized trees, shrubs, saplings, tall grasses, and man-made structures could be used as nest sites for other (non-raptor) birds. Several box culverts present where City Park Channel extends under arterial roadway crossings and provide suitable nesting habitat for migratory birds such as Cliff Swallows and Barn Swallows.

Th nesting season for most birds generally occurs from April through August, although raptors may nest as early as February. Once an alternative is selected, the study area and 0.5-mile buffer around the alternative should be re-surveyed for potential nesting birds. If construction activities occur during the nesting season, it is recommended that the project complete pre-construction surveys similar to those outlined in CDOTs Revision of Section 240–*Protection of Migratory Birds.* If active raptor nests are confirmed within a 0.5-mile buffer of the study area prior to the onset of construction, it is recommended that a qualified wildlife biologist consult with CPW to determine an appropriate survey protocol to ensure that project activities do not disrupt nesting activities within CPW recommended raptor buffers (CPW, 2020).

4.3 Senate Bill 40

No features which meet the jurisdictional SB 40 criteria were identified in the study area, therefore, no additional evaluation or SB 40 certification would be required.

4.4 Waters of the United States

Potential WOTUS, including non-wetland waters and wetlands, occur in the study area. A delineation in accordance with USACE protocols has been completed to determine the boundaries and extents of non-

wetland waters and wetlands. These boundaries should be incorporated into the project design to help avoid and minimize impacts to potential WOTUS.

The project could submit a request for an Approved Jurisdictional Determination (JD) to the USACE to determine whether the non-wetland waters and wetland features in the study area are under the jurisdiction of the USACE. If a feature is determined non-jurisdictional, Section 404 permitting would not be required. Since CDOT is expected to be involved in the project, their mitigation requirements, which are applicable regardless of jurisdiction and only to wetlands, mean it may be more efficient to assume certain features are jurisdictional. This is because an Approved JD can take six months or more and the level of effort needed to complete a Nationwide Permit is low and can be accomplished in a similar or shorter timeframe.

If features are jurisdictional or assumed to be jurisdictional, impacts to WOTUS would need to be determined, and Section 404 permitting would be required. The type of permitting (Nationwide Permit or Individual Permit) will be dependent on the amount and type of impacts to WOTUS. If impacts to WOTUS can be avoided, then no further action is required. Early coordination with the USACE will be required to determine the appropriate permitting needs for the Ditch realignment and piping.

Regardless of jurisdiction, CDOT requires all wetlands be mitigated at a 1:1 ratio. In addition, if permanent wetland impacts will be greater than 500 SF (or combined temporary and permanent impacts greater than 1,000 SF), then a CDOT Wetland Finding report will be required.

4.5 Noxious Weeds

Noxious weeds typical of roadside habitats are present in the study area. No List-A noxious weed species were noted, and the List B and List C weeds identified did not appear to be greater in densities than the surrounding roadside areas. Therefore, a noxious weed management plan is not recommended; however, an updated noxious weed survey should be completed once an alternative is selected to determine current noxious weed conditions. The project is required to minimize the spread of noxious weeds during construction, and it is recommended that the project follow best management practices (BMPs) similar to those outlined in CDOTs Revision of Section 217 - *Herbicide Treatment*.

5. Limitations

This report was prepared by Pinyon, at the request of and for the sole benefit of SEH, or any entity controlling, controlled by, or under common control with SEH. The conclusions and recommendations offered in this report are based on the data obtained from a limited number of samples, within a prescribed study area as described in the text. Soil, hydrologic, vegetation, biological and ecological conditions typically vary even over short distances, by season, by elevation, and by meteorological conditions. Thus, the nature and extent of variations outside this biological investigation may not become evident except through further investigation. It is possible that ecological conditions may change from those observed, particularly over time.

Cultural Existing Conditions Technical Memorandum

Date:	July 29, 2022

Subject:	US287 120th Avenue Multimodal and Safety Study Historic Resources Existing Conditions Review

Introduction and Project Description

The City and County of Broomfield is considering safety, capacity, and multimodal improvements along US 287 (and SH 128/120th Avenue) between the US 287/Midway Boulevard and Alter Street connection to the eastern terminus at the Lowell Boulevard intersection with US 287. This project will plan for future improvements that will positively impact corridor safety, roadway capacity, and operations. The study will evaluate traffic congestion, safety, travel lane capacity needs, travel-time reliability, transit operations, transit options, and transit-related infrastructure improvements on the corridor to facilitate trip reliability and reduced delay for various modes of travel. As any alternative designs that result from this study will likely utilize federal funds, the Colorado Department of Transportation (CDOT) is participating in the study with oversight on the existing conditions analysis and future alternative development.

Federal legislation requires that government agencies assess the impacts of their decisions and actions (undertakings) on historic properties before approving such actions. Historic properties are defined as any prehistoric or historic districts, sites, buildings, structures, or objects that are eligible for or already listed in the National Register of Historic Places (NRHP). Also included are any artifacts, records, and remains (surface or subsurface) that are related to and located within historic properties and any properties of traditional religious and cultural importance to Tribes. Historic properties are evaluated for NRHP eligibility based on criteria identified by the National Park Service and must retain sufficient integrity to convey historic significance. Historic resource evaluations typically use an age threshold of 50 years when identifying potentially eligible historic resources. Infrastructure projects often use 45 years as the year-built threshold to accommodate extended review as necessary while minimizing the need to reevaluate project impacts to individual resources. In some instances, resources determined to have exceptional importance that are less than 45 years old may be considered eligible to the NRHP.

Regulatory Framework

- Section 106 of the National Historic Preservation Act (36 CFR Part 800)
- The Colorado Register of Historic Places Act (CRS 24-80.1-101 to 108)
- Section 4(f) of the 1966 Department of Transportation Act (23 CFR Part 774)

Pinyon Environmental, Inc. (Pinyon), is assessing and analyzing the environmental constraints for historic resources along US 287 (and SH 128/120th Avenue) between the US 287/Midway Boulevard and Alter Street. This analysis consists of desktop survey along with state and federal database searches to identify

resource considerations in the study area. The constraints analysis aims to be broad enough to encompass the variety of potential alternatives that the design team may develop for the corridor.

Study Area & Methodology

Pinyon was provided a Study Area for the proposed undertaking consisting primarily of 120th Avenue. Pinyon historians conducted a desktop analysis to assess the Study Area for historic and potentially historic resources. To account for a yet to be determined construction horizon, resources that are 45 years of age or older (constructed on/before 1977) are considered in this evaluation. Previously surveyed historic resources were identified through a file search of the Colorado Cultural Resources Online Resource (COMPASS) database maintained by Office of Archaeology and Historic Preservation (OAHP) and CDOT's Historical Sites Inventory. Potentially historic resources were identified through a records search of the Broomfield, Adams, and Jefferson County assessor records, the Online Transportation Information System (OTIS) maintained by CDOT, and the Historic Highway Inventory completed by CDOT in 2016. This data was supplemented with Government Land Office (GLO) records, aerial images available on Google Earth, and with current and historic topographic maps (Google Earth Pro, 2022; USGS 1899; USGS, 1940; USGS, 1953; USGS, 1960; USGS, 1983).

Cultural Resource File Search

The COMPASS file search requested through OAHP was conducted on April 28, 2022 (History Colorado, 2022). The search identified 51 previously evaluated resources within the Study Area (Figure 1). Please note not all resources listed in Table 1 have associated locational data. Within the Study Area there are seven National Register of Historic Places (NRHP)-eligible or NRHP-listed resources, and two resources with a determination of "needs data". The file search revealed approximately 60 newly identified, potentially historic resources, including a segment extension of US 287.

Cultural Resource Recommendations

Once the preferred design alternative is identified, should the project have a nexus to Section 106 of the National Historic Preservation Act, or the Colorado State Register of Historic Places Act consultation

with SHPO may be required. The scope of the historic evaluation should be determined in coordination with the CDOT Region 1 Historian.

- The study area and the resources described in this memo do not represent an Area of Potential Effect, which must be developed once a preferred design has been chosen. The resources described in this memo represent only those resources present within the study area and may not represent the resources affected by future project(s).

- Within the Study Area there are noise receptors that meet the 1977 date of construction identified for evaluation. Given the possibility of capacity improvements, noise effects and the effects of noise mitigation on historic resources will need to be analyzed.

- Resources with an official determination of eligible older than five years may require reevaluation in accordance with *Programmatic Agreement Among the Federal Highway Administration, the Advisory Council on Historic Preservation, and the Colorado Department of Transportation Regarding Compliance with Section 106 of the National Historic Preservation Act, As It Pertains to the Administration of the Federal-Highway-Aid Program in Colorado* (2014, PA).

- Newly identified potentially historic resources may require evaluation of eligibility and effects using the appropriate OAHP cultural resource inventory form. Historic Section 4(f) of the Department of Transportation Act would apply to those resources determined NRHP eligible and would require additional documentation from CDOT/FHWA, assuming an FHWA nexus.

- Resources with an official determination of not eligible will not require reevaluation unless alterations to the property's integrity warrant reevaluation, in accordance with the PA.

- In 2016 US Highway 287 was identified in CDOT's Historic Highway Inventory as having NRHP significance under NRHP Criterion A as an early/prominent project of the Colorado Highway Department and for its association with federal work relief programs, as well as under NRHP Criterion C as a representative example of a transportation route in Colorado. The resource within the Study Area has not been evaluated for historic integrity. A segment of the resource may therefore require evaluation of NRHP integrity. The resource segment should be evaluated for eligibility and effects following guidance outlined in the white paper *Walking the Line: Guidance for Identification, Evaluation, and Field Recordation of Historic Linear Sites* (November 2021) and this segment assessed as either supporting or not supporting of the overall eligibility of the entire linear resource.

- Structure E-16-CU and Structure E-16-GI are 2-span box culverts constructed in 1965. Concrete box culverts are a common bridge type identified in the *Program Comment for Common Post-1945 Concrete and Steel Bridges* issued by the Advisory Council on Historic Preservation (ACHP) in 2012. An ACHP program comment provides an alternative method for Federal agencies to meet their Section 106 obligations. FHWA requested the Program Comment for common bridge types and is responsible for its implementation, including programmatic mitigation for the effects of undertakings on post-1945 common bridges. Both of these structures are exempt from Section 106 review because they are not listed on the Bridge Program Comment Excepted Bridges List and both meet the criteria outlined in Section V, Part A, "Common Bridge Types" of the Program Comment. On December 4, 2015, the President signed into law the Fixing America's Surface Transportation (FAST) Act (Pub. L. 114-94). Section 1303 of the FAST Act amended the Section 4(f) statute (at 23 U.S.C. § 138(e) and 49 U.S.C. § 303(g)) to exempt from Section 4(f) review

common post-1945 concrete or steel bridges or culverts (as described in 77 Fed. Reg. 68790 (Nov. 16, 2012)) that are exempt from individual review under Section 106 (54 U.S.C. § 306108).

- Given that the project or projects along the corridor may trigger noise analyses as described in the Noise Memo, the effects of increased noise and/or noise mitigation, should be analyzed as an effect of the undertaking.
- This memo should be used as a starting point for historic resources evaluation only and is not comprehensive.
