MULTIMODAL STUDY

Existing Conditions & 2050 Baseline Traffic Analysis Report

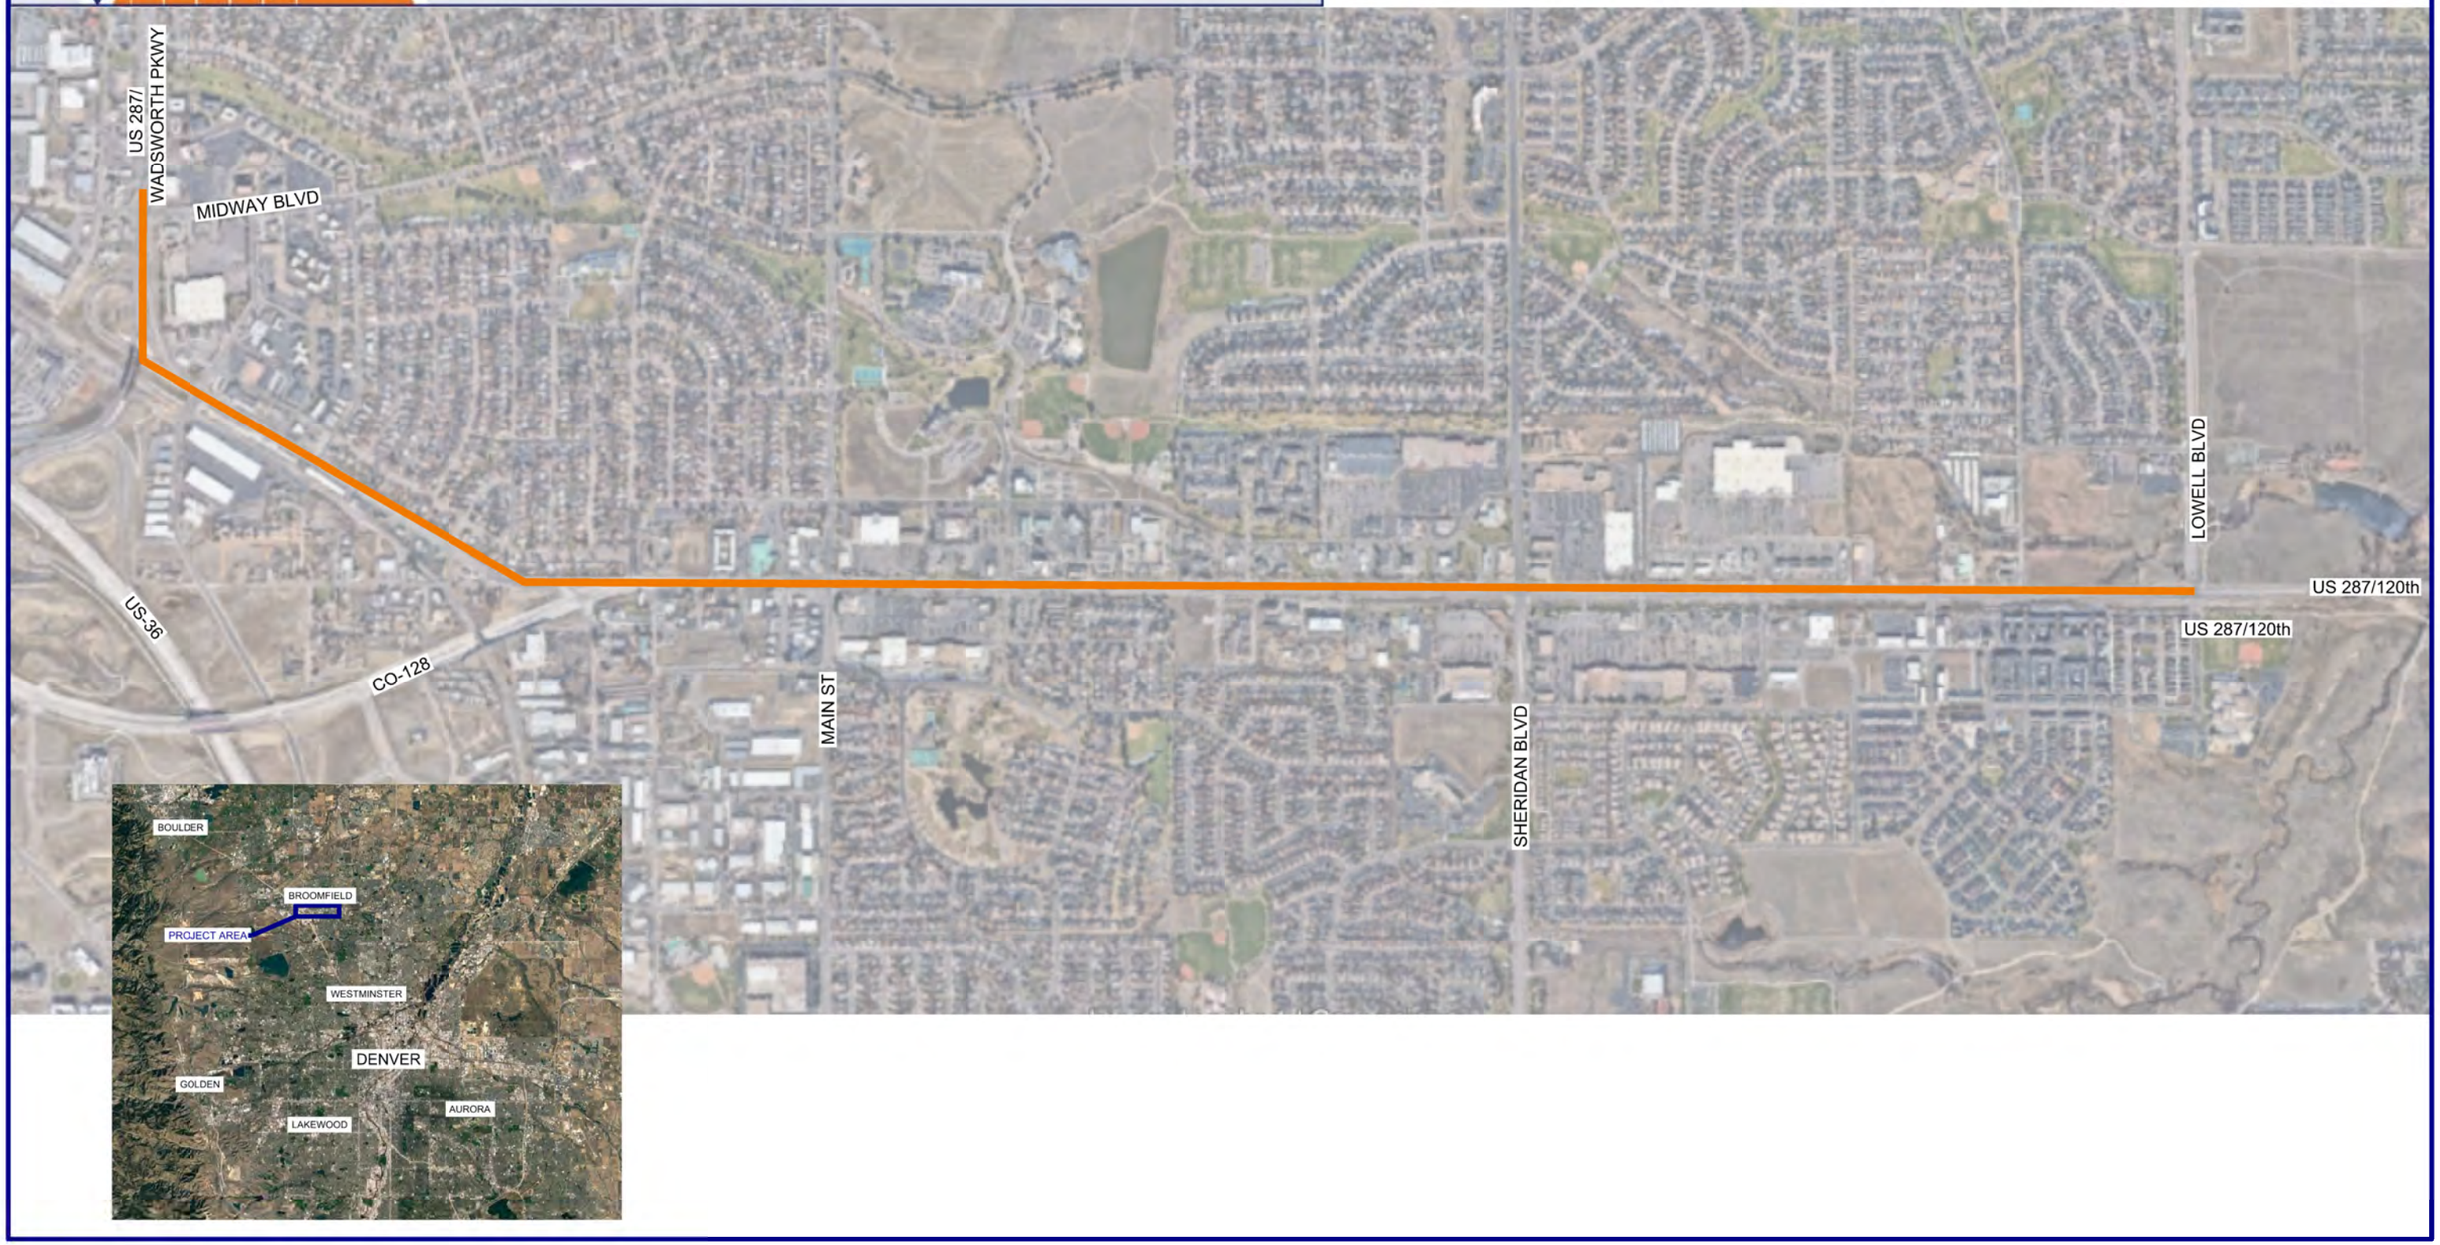
US 287/120th Avenue Multimodal and Safety Study

Prepared for Colorado Department of Transportation – Region 1

Introduction

The US 287/120th Avenue corridor is becoming increasingly important to the Colorado Department of Transportation (CDOT) and the City & County of Broomfield not only for its residents but as a multimodal commuter facility as well. Forecasted growth for the area will result in an increased need for improvements along the corridor to provide adequate multimodal connectivity, mobility, and safety. The study area is depicted in **Figure 1**. The City and Colorado Department of Transportation (CDOT) now have the opportunity to define the quality of life for its citizens with the *US 287/120th Avenue Multimodal and Safety Study*. The objectives for this project are to build on previous City, CDOT, and Regional Transportation District (RTD) studies and improvement efforts to develop a comprehensive plan that improves operations for all modes of transportation and increases safety for all users while not precluding economic development throughout the corridor.

This *Existing Conditions & 2050 Baseline Analysis Report* is a supporting document that will be foundational to the *US 287/120th Avenue Multimodal and Safety Study*. It includes the following:



- Description of the existing area transportation system
- analyses of current and future baseline vehicular traffic operations,
- Crash data analysis
- a summary and analysis of pedestrian and bicycle patterns,
- an inventory of bus ridership data.

The information contained in this report will provide a basis for identifying future shortfalls in the transportation system, for developing alternative solutions, and for narrowing the focus to preferred methods to meet future demands. This broader view of the transportation system and its role in supporting this multimodal vision is reflected in this *Existing Conditions & 2050 Baseline Analysis Report*, which includes sections on the state of pedestrian, bicycle, and transit travel within the study area.

Next Steps. Building on the findings from the existing conditions, the project will enter the process of evaluating alternatives and potential solutions to address the deficiencies identified in this report.

US 287/120th Ave
MULTIMODAL STUDY

Figure 1: STUDY AREA

Roadway Conditions - US 287

US 287

The study limits on US 287 extend approximately 3.3 miles between Midway Boulevard to the northwest and Lowell Boulevard to the east. The corridor is classified as a Non-Rural Principal Highway (NR-A) by CDOT. Between the intersections of Upham Street and Lowell Boulevard, US 287 is also known as CO 128 and 120th Avenue. US 287/CO 128/120th Avenue mainly runs east-west between Upham Street and Lowell Boulevard. Just to the west of Upham Street, US 287 and CO 128 diverge, with US 287 branching northwest-southeast on a diagonal to the interchange with Wadsworth Parkway then continuing north-south to the study limit terminus at Midway Boulevard.

Within the study area, US 287/120th Avenue has two through lanes westbound and three lanes eastbound divided by raised median from Lowell Boulevard to Sheridan Boulevard. There are right turning lanes and acceleration lanes throughout and left turn lanes at intersections with minimum three-quarter access. Sheridan Boulevard to Nickel Street is a four-lane divided roadway with right turn auxiliary lanes and left turn lanes. US 287/120th Ave intersects CO 121 utilizing slip ramps and merges to begin travelling north-south. From CO 121 to Midway Boulevard continues as a four-lane divided roadway with raised median and continuous auxiliary lanes and available left turn lanes. Sidepaths and sidewalks provide pedestrian and bicycle accommodations along US 287 but are not continuous throughout the corridor or consistent in width. Multiple bus stops are also located along US 287 to provide local and regional connectivity via RTD route 120. The posted speed limit from Lowell Boulevard to just east of Lamar Street is 50 mph, 40 mph from Lamar Street to just west of Main Street, and 35 mph from Main Street to Midway Boulevard.

Signalized Intersections

Lowell Boulevard

Lowell Boulevard is a four lane north-south Major Arterial in the vicinity of its intersection with US 287. Regionally, Lowell Boulevard runs south from CO-7 and terminates just south of the studied intersection at 118th Place. It serves multiple residential areas within the City & County of Broomfield.

Bradburn Boulevard

Bradburn Boulevard is a two-lane north-south Local Street that extends between US 287/120th and W 116th Way. It services predominantly commercial and residential areas in Westminster south of US 287/120th.

Vrain Street

Vrain Street is a two-lane north-south Local Street that extends from the Walmart Parking lot at W 121st Avenue to the north and W 118th Place to the south. Vrain Street serves as a connection to the commercial areas one block north and south of US 287, including Walmart, fast-food restaurants, Whole Foods Market, and other businesses.

Sheridan Boulevard

Sheridan Boulevard is a four-lane north-south Major Arterial. Within the vicinity of its intersection with US 287, Sheridan Boulevard services multiple retail shopping areas. Sheridan originates in the north at CR 4, just north of CO-7, and runs south well into the Denver Metro area.

Chase Street

Chase Street is a two-lane north-south Local Street that extends a short distance between E 1st Avenue and the W 120th Avenue Frontage Road. Chase Street serves as a direct connection to the commercial and residential areas one block north and south of US 287, including Home Depot, King Soopers, restaurants, and Town Centre Senior Apartments.

Lamar Street/Greenway Drive

Lamar Street (north of US 287)/Greenway Drive (south of US 287) is a north-south four-lane divided Connector that extends between E 1st Avenue and Greenway Drive. North of E 1st Avenue, the roadway becomes Spader Way, which continues as a two-lane undivided roadway to Midway Boulevard to the north. Lamar Street/Greenway Drive connect residential & commercial areas, retail businesses, public park & recreational areas, as well as government centers.

Village Square

Village Square serves as a north-south access to Pacific Ocean Marketpalce and other commercial retailers. Village Square will also serve the future Broomfield Town Square redevelopment area.

Main Street

Main Street is classified as a Minor Arterial. Main Street serves as a connection between neighborhoods and to commercial areas, running through Broomfield from its south terminus at 112th Avenue to its northern conclusion at 136th Avenue. Main Street serves as two-lane divided roadway to the south of US 287/120th and a four-lane section to the north of US 287/120th until E 1st Avenue. North of E 1st Avenue, Main Street transitions to a 3-lane roadway.

CO 128

US 287/120th and CO 128 have a merging junction along the project study corridor where US 287 shifts its direction from east-west to northwest-southeast. CO 128 continues in the east-west direction from this junction and is classified as a Minor Arterial. CO 128 terminates to the west at SH 93. At this merging junction, CO 128 has three through lanes westbound and two through lanes eastbound divided by median. CO 128 serves Broomfield by connecting residences, multi-family housing, the Broomfield Urban Transit Village TOD, Original Broomfield TOD, and the Interlocken business district.

Nickel Street

Nickel Street is a three-lane Connector roadway. To the southwest of US 287, Nickel Street guides traffic over rail lines to Industrial Lane and Commerce Street, which facilitate industrial operations in that area. To the northeast of US 287, Nickel Street serves a commercial area before terminating into Midway Boulevard. Nickel Street includes on-street bicycle lanes in both directions that connect with the on-street bicycle lanes on Commerce Street and bicycle facilities on Midway Boulevard.

CO 121 (Wadsworth Parkway)

Wadsworth Parkway merges with US 287 via slip ramps. In this area, Wadsworth Parkway is a north-south divided four-lane Regional Arterial. Wadsworth Parkway runs north-south through the Denver Metro area and enters Broomfield near the 112th Avenue alignment before terminating at the aforementioned merge point with US 287. In this short stretch, the corridor offers access to US 36, serves as part of Interlocken Loop, and serves business districts and multi-family housing.

Midway Boulevard

Midway Boulevard is an east-west Minor Arterial. From the west, Midway Boulevard begins at the Hunter-Douglas Business Park and extends east through Broomfield until it rebrands as W 128th Ave at Zuni Street. The west leg has three through lanes while the east leg has four. Midway Boulevard serves an eclectic mix of uses including business district, industrial, commercial, residential, and park space.

Parallel Travel Ways

1st Avenue

1st Avenue is a two lane east-west Connector roadway that runs parallel on the north side of US 287. It terminates at Nickel Street to the west and Sheridan Boulevard to the east. 1st Avenue is a residential road that has on street parking in both directions. This road is used as an alternative bike route.

120th Avenue Frontage Road

120th Avenue Frontage Road is a two lane east-west roadway that runs parallel to the south side of US 287. It connects Gray St to the west and the Kohl's parking lot to the east. This road is used as a bypass road around the Sheridan Boulevard and 120th Avenue intersection.

Roadway Features

Field visits were completed in March 2022 to verify existing roadway configurations at each intersection, verify locations and type of control at business and driveway accesses, and document existing roadway characteristics and roadway conditions within the study area. This information was compiled and analyzed to identify potential roadway deficiencies, which are detailed in the following section.

Within the study area, there are a total of eleven signalized intersections at the following locations:

- US 287 / Lowell Boulevard
- US 287/ Bradburn Boulevard
- US 287 / Vrain Street
- US 287 / Sheridan Boulevard
- US 287 / Chase Street
- US 287 / Lamar Street and Greenway Drive
- US 287/ Village Square
- US 287 / Main Street
- US 287 / CO 128 and Upham Street
- US 287 / Nickel Street
- US 287 / Midway Boulevard

Lane configurations of these signalized intersections are depicted in **Figure 2**.

Figure 2 also displays the locations of one unsignalized intersection within the study area. The location of these unsignalized intersections are as follows:

- US 287 / Loop Access

Business and driveway accesses along US 287 mostly operate with 3/4 movement, right-in/right-out restrictions, or right-in only restrictions. **Figure 2** depicts the location and type of control used at each business and driveway access within the study area.

Along with verifying the roadway configurations and type of control, characteristics documented during field visits include:

- Roadway, median, and sidewalk widths
- Locations of major structures, such as pedestrian underpasses
- Locations and legends of signs
- Locations of lighting
- Locations of guardrail, retaining walls and fences, and major drainage features
- Pedestrian curb ramp conditions and slopes
- Locations of pedestrian push buttons at signalized intersections
- Pedestrian crossing distances at signalized intersections

A general overview of these roadway characteristics can be seen in **Figure 3**. More detailed information regarding medians, guardrail, walls and fences, drainage features, and roadway deficiencies may be found in the subsequent sections. Information relating to existing pedestrian, bicycle, and transit facilities may be found in the **Pedestrian and Bicycle Conditions** and **Transit Service** sections of this report.

Median

General locations and types of existing medians, which include raised median, painted median, and two-way left turn lanes, are outlined in **Table 1**. Roadway sections not listed below are typically designated left turns, with a solid double yellow strip to separate the left turning traffic and the opposing through traffic.

Table 1 - Median Locations and Type Along Study Roadway

Roadway	Approximate Locations	Type
US 287/120th	West of Lowell Blvd to Bradburn Blvd	Raised Concrete Median with landscaping and a left turn lane at Perry St.
US 287/120th	West of Bradburn Blvd to Vrain St	Raised Concrete Median with landscaping and a left turn lane east of Tennyson Way
US 287/120th	West of Vrain St to Sheridan Blvd	Raised Concrete Median with left turn lanes at Sheridan Crossing Shopping Center
US 287/120th	West of Sheridan Blvd to Chase St	Natural landscaped median with raised curb at intersections
US 287/120th	West of Chase St to Ash St	Natural landscaped median with raised curb at intersections
US 287/120th	West of Ash St to Lamar St	Raised Concrete Median topped with landscaping with left turn lane at Shopping Center
US 287/120th	West of Lamar St to Village Square	Raised Concrete Median topped with landscaping
US 287/120th	West of Village Square to Main St	Raised Concrete Median topped with landscaping for approximately 100’ and then Painted Median
US 287/120th	West of Main St to Saulsbury St	Painted Median with left hand turn lanes at Reed St
US 287/120th	West of Saulsbury St to Upham St	Raised Concrete Median with left hand turn lanes at Teller St and Emerald St
US 287	North of Upham St to Hemlock Way	Raised Concrete Median for approximately 200’ and then Painted Median
US 287	North of Hemlock Way to Nickel St	Raised Concrete Median with left hand turn lanes at Shopping Centers
US 287	Nickel St to Midway Blvd	Fully landscaped median with raised curb

Guardrail

General locations of guardrail in **Table 2**. All existing guardrails are located on US 287.

Table 2 - Guardrail Along Study Roadway

Roadway	Location	Approximate Length
US 287/120th	Southwest Corner of Lowell Blvd	250’
US 287/120th	South side of US 287 between Lowell Blvd and Bradburn Blvd	350’
US 287/120th	Southeast Corner of Vrain St	50’
US 287/120th	Southwest Corner of Vrain St	100’
US 287/120th	Southeast Corner of the Sheridan Shopping Center	40’
US 287/120th	Southwest Corner of the Sheridan Shopping Center	150’
US 287/120th	Southeast Corner of the entrance west of the Sheridan Shopping Center	40’
US 287/120th	Southwest Corner of the entrance west of the Sheridan Shopping Center	160’
US 287/120th	Southwest Corner of Chase St	130’

Fence/Wall

General locations and types of existing fence and walls are outlined in **Table 3**. Most walls and fences are located directly at the back of sidewalk and are mostly in place for pedestrian safety.

Table 3 - Fence and Walls Along Study Roadway

Roadway	Location	Type
US 287/120th	Tennyson Way to Vrain St	Metal Fence
US 287/120th	Vrain St to Sheridan Shopping Center	Wrought Iron Fence
US 287/120th	Northwest Corner of Sheridan Blvd for 90’	Metal Fence
US 287/120th	Southwest Corner of Greenway Dr	Wooden Retaining Wall
US 287/120th	Southeast Corner of Village Square	Concrete Retaining Wall
US 287/120th	Northwest Corner of Main St	Concrete Retaining Wall
US 287/120th	400’ West of Main St	Plastic Fence
US 287/120th	Southeast Corner of Upham St	Brick Retaining Wall
US 287/120th	Northwest Corner of Upham St	Concrete Retaining Wall
US 287	Upham St to Laurel St	Brick Wall
US 287	Marble St to Nickel St	Metal Fence

Lighting

General locations of existing street lighting are outlined in **Figure 3**. Lighting is consistently spaced along US 287 and at the study intersections.

Drainage Features

Drainage Ditch Southside of US 287 West of Bradburn Blvd

General locations and types of existing drainage features are outlined in **Figure 3**. The major drainage features that were noted were the drainage ditch (City Park Channel) running on the southside of US 287. The concrete drainage ditch outfalls into the Big Dry Creek east of Lowell Blvd and starts at a road crossing west of Chase St. There is also a concrete drainage feature west of Upham St. There are additional areas to the north and south of the study area that appear to be retention areas for storm water drainage.

Roadway Deficiencies

The existing roadway infrastructure along each study corridor was evaluated to determine potential issues relating to roadway alignment and driver behavior, signal equipment installations, auxiliary lane configuration at signalized intersections, and overall pavement condition. **Figure 4** summarizes all observed potential issues within the study area.

Vehicles weaving from Right hand turn lane at US 287 and Lowell Blvd

Roadway Alignment and Driver Behavior

Three notable potential issues relating to roadway alignment and driver behavior were identified during the field visits. The first observation was the weaving maneuvers along US 287/120th. Vehicles turning right onto US 287 all have receiving auxiliary lanes that swiftly turn into right turn lanes for downstream driveways or side streets. The resulting weaving sections in these areas can be short and dangerous for entering and exiting vehicles. Ultimately, these weaving vehicles may cause a queue to form in the channelized right turn lane and prohibit other travelers from continuing straight in the outside through lane as they wait for a break in northbound traffic to complete this merging maneuver.

View from southbound right turn lane of pedestrian crossing at the diverging intersection of US 287 and CO 128.

The second potential issue is the limited sight distance from the southbound to westbound right turn lane at the diverging intersection of CO 128 and US 287 to the associated Pedestrian Crossing at the intersection. While there is a warning sign that is visible for the driver, the pedestrian is not visible. Similarly, pedestrians cannot see the vehicles. With little advanced warning, drivers may not have adequate time to yield to pedestrians since vehicles travel at high speeds through the channelized right turn.

View across from Shopping Center between Upham St and Nickel St.

Lastly, on US 287 from Upham St to Nickel St, there is a shopping center with parking that forces drivers to creep into US 287 through lanes to make maneuvers. The spacing of the parking area is too narrow to accommodate vehicles behind the parking spaces. This results in vehicles needing to back out onto US 287 when exiting these parking spaces. This causes slowdowns along the corridor in addition to presenting major safety issues for all vehicles.

Signal Equipment Installations

In general, MUTCD recommends that pedestrian pushbuttons be installed within 10" of a flat surface for ADA reachability. They should also be installed on a 3' flat area within 3'-5' of the edge of the roadway. Pedestrian pushbuttons within this project study area were largely found to be incompliant.

View of non-compliant pedestrian pushbutton at US 287 and Chase St.

Pavement Condition

Overall, the existing roadway pavement within the study area appears to be in fairly good condition, with some surface wear and minor cracking throughout. Several locations of moderate concrete spalling were observed during the field visits. Spalling was typically located along joints and at bus stops. There were also short sections of damaged raised curb within the median areas along US 287.

Rutting of roadway on US 287 at US 287 and Nickel St.

Surface spalling of roadway on US 287.

Surface wear of roadway on US 287.

Vehicular Traffic Operations

CDOT identifies US 287/120th as a Non-Rural Principal Highway (NR-A) corridor. Typically, the capacity and operations of the intersections of an urban arterial corridor define the operational level of the corridor as a whole. However, speed analysis and queuing along the corridor will provide further insight into the overall health of the corridor operations. Measures of effectiveness, (MOE) such as average delay per vehicle, intersection Level of Service (LOS), arterial LOS, and average queue lengths were acquired from Synchro and SimTraffic (Version 9.1, build 904, revision 125) traffic analysis software. The Synchro/SimTraffic software package utilizes criteria described in the Highway Capacity Manual. Synchro was primarily used to analyze LOS, vehicle delay, and average queue lengths.

LOS is a measure of effectiveness used to describe operation conditions at an intersection or along a corridor. LOS categories have a range from A to F and are based on the predicted delay in seconds per vehicle, with LOS A being very good operations and LOS F having poor, congested operations. Existing corridor lane configurations and balanced peak hour traffic volumes were used to analyze the intersection LOS for both existing and future year 2040 analysis. **Table 4** summarizes the signalized intersection LOS thresholds used in this analysis.

Table 4 - Intersection Level of Service (LOS) Criteria

LOS	Signalized Delay Range (seconds/vehicle)	Two-Way Stop Control Delay Range (seconds/vehicle)
A	0 - 10	0 - 10
B	10 - 20	10 - 15
C	20 – 35	15 – 25
D	35 – 55	25 – 35
E	55 – 80	25 – 35
F	80 and above	50 and above
Source: Highway Capacity Manual, 6th Edition		

Additionally, SEH performed a travel time and delay study to observe and quantify average peak hour travel time and delay.

Existing Traffic Conditions

Traffic count data were collected within the study area during April 2022. The traffic count data is included in **Appendix A**.

Daily Traffic Volumes

Daily traffic volumes were collected on April 5, 2022, at mid-block segments along US 287/120th. Three locations along the corridor were collected: west of Nickel Street, west of Emerald Street, and west of Lowell Boulevard within the study area. Traffic data was collected on a Tuesday during normal traffic conditions in order to represent an average weekday.

The daily traffic volumes are summarized in **Figure 5**. Traffic volumes within the study area range from 13,444 to 45,797 vehicles per day along the study corridors, with the greatest volume occurring near Lowell Boulevard.

Peak Hour Traffic Volumes

Existing turning movement counts were collected on April 5, 2022 by All Traffic Data for the following sixteen locations:

- Wadsworth Parkway / Midway Boulevard (Signalized)
- Wadsworth Parkway / US 287 Loop Ramp (Unsignalized)
- US 287 / Nickel Street (Unsignalized)
- US 287 / Laurel Street (Unsignalized)
- Nickel Street / 3rd Avenue (Unsignalized)
- US 287 / CO 128 / Upham Street (Signalized)
- 120th Avenue / Main Street – Greenway Drive (Signalized)
- 120th Avenue / Village Square (Signalized)
- 120th Avenue / Lamar Street (Signalized)
- 120th Avenue / Chase Street (Signalized)
- 120th Avenue Frontage Road / Chase Street (Signalized)
- 120th Avenue / Sheridan Boulevard (Signalized)
- 120th Avenue / Vrain Street (Signalized)
- 120th Avenue / Bradburn Boulevard (Signalized)
- 120th Avenue / Lowell Boulevard (Signalized)

The network peak hour occurs between 7:30-9:00 AM, and 4:00-5:45 PM with varying 1-hour intervals for each intersection.

Existing Traffic Operations

The Synchro model for this study was developed in conjunction with signal timings provided by the CDOT and the City & County of Broomfield. Currently, the signals along the US 287/120th corridor run on an adaptive traffic control system and do not adhere to set cycle length or splits. SEH made assumptions for the cycle length in order to calibrate the model to what we observed in the field. The following assumptions were made:

- Morning peak hour cycle length along US 287/120th from Lowell Boulevard to Upham Street – 120 seconds
- Morning peak hour cycle length along US 287/120th at Nickel Street – 64 seconds
- Morning peak hour cycle length along US 287/120th at Midway Boulevard – 150 seconds
- Evening peak hour cycle length along US 287/120th from Lowell Boulevard to Upham Street – 120 seconds
- Evening peak hour cycle length along US 287/120th at Nickel Street– 64 seconds
- Evening peak hour cycle length along US 287/120th at Midway Boulevard– 150 seconds

Table 5 and **Table 6** display the morning and evening peak hour Synchro operations results including LOS and queuing information. The level of service worksheets and Synchro outputs are contained in **Appendix B** for reference.

An overview of the existing intersection level of service (LOS) results are displayed in **Figure 6** and **Figure 8**. While individual movements may fail, each intersection was evaluated as a combination of all movements. Bus operations, provided by Regional Transportations District (RTD), is factored into the LOS as a vehicle moving along the corridor but will be discussed in detail later in this report. This overall rating was then compared to the CDOT functional LOS benchmark of D to categorize the intersection as passing or failing. Failing intersections are shown in red in **Table 7**.

Table 7 - Existing Intersection Level of Service (LOS) Results

Intersection	AM / PM Peak Hour	
	LOS	Delay (sec/veh)
Midway Blvd / US 287	D / **E**	45.3 / **63.1**
Nickel Street / US 287	B / B	12.2 / 11.1
Laurel Street / US 287	A / A	1.2 / 0.8
Upham Street / US 287 / 120th Ave	B / C	16.6 / 32.8
Main Street / 120th Ave	C / D	27.5 / 38.9
Shopping Safeway / 120th Ave	A / A	3.4 / 7.7
Greenway Dr - Lamar St / 120th Ave	A / C	9.5 / 15.3
Chase Street / 120th Ave	B / B	14.4 / 14.9
Frontage Road / Chase Street	A / A	1.5 / 3.0
Sheridan Blvd / 120th Ave	**E / F**	**61.5 / 99.8**
Vrain Street / 120th Ave	B / D	18.4 / 41.6
Bradburn Blvd / 120th Ave	B / B	10.7 / 15.0
Lowell Blvd / 120th Ave	C / C	27.0 / 24.7

According to the results of the analysis shown in **Table 7**, the signalized intersection of Sheridan Boulevard and US 287/120th operates at a failing LOS during both AM and PM peak hours. The Midway Boulevard and US 287/120th intersection operates at a LOS E during the PM peak hour. All other intersections operate at an overall LOS D or better during both the morning and evening peak hour.

In addition to the intersection LOS evaluation, queues along US 287/120th were reviewed to identify areas of congestion and confirm observations made during the travel time and delay study. SimTraffic traffic analysis software was used to determine average queue lengths for each movement along the main roadway corridor. The average queue lengths for each intersection movement are tabulated in **Table 5** and **Table 6** at the end of the report.

Average queue lengths along US 287/120th are generally larger in the westbound direction in both the morning and evening peak hours. The evening peak hours demonstrate longer average queue lengths overall. Several left turning movement queues block through traffic, especially on side streets where the signal timing is not given preference.

Future Traffic Conditions

The future year for this study is 2050, which is consistent with the horizon year for the 2050 Denver Regional Council of Governments (DRCOG) travel demand focus model.

2050 Traffic Forecasts

Traffic volume forecasts were developed for roadways within the project area in order to identify the roadway and intersection improvements needed to accommodate future traffic growth.

Socioeconomic data and traffic forecasts from the DRCOG regional travel demand focus model 2.3.0 was reviewed to evaluate projected transportation trends along US 287/120th and the project area roadway intersections. The roadway networks in both the 2020 and 2050 models were checked for the reasonableness of the assumptions of facility types, connections, and lane configurations within the vicinity of the project area.

The socioeconomic data in the DRCOG travel demand models was reviewed and compared for the Transportation Analysis Zones (TAZs) generally located along the US 287/120th corridor. The 2020 and 2050 land use values in the TAZs within the vicinity of the project area are shown in **Table 8**.

As shown in **Table 8**, the DRCOG socioeconomic data assumes little to no growth in households within the TAZs in the project area. Employment growth is much higher on the west end of the corridor in the industrial areas and near the US 287-CO 128 Junction.

Table 8 - DRCOG TAZ Socioeconomic Data

TOTAL EMPLOYMENT & TOTAL HOUSEHOLDS							
TAZ		2020		2050		DIFFERENCE	
ID	Relation to US 287/120th	TOT EMP	TOT HH	TOT EMP	TOT HH	TOT EMP	TOT HH
2330	S	634	771	722	877	88	106
2331	S	1222	556	1343	901	121	345
2335	S	510	1593	1108	1655	598	62
2302	S	384	551	537	558	153	7
2303	S	2090	20	3703	26	1613	6

2301	N	1465	417	1489	428	24	11
2327	N	805	1002	1219	1093	414	91
TOTAL		14,126	6,773	19,375	7,418	5,631	645

2050 baseline daily traffic forecasts were developed using average daily traffic (ADT) projections on CDOT's Online Transportation Information System (OTIS) in conjunction with DRCOG model projections. Traffic growth is expected to be approximately 0.5% annually within the study area with the largest increases near Midway Blvd, Main St, and Lowell Blvd. Additionally, the trip projections for the proposed Broomfield Town Square, as outlined in the Traffic Impact Analysis – Broomfield Town Square prepared by Wilson & Company (January, 2021), were applied to the 2050 baseline volumes for the intersections of 120th Ave/Main St, and 120th Ave/Lamar St/Greenway Dr. **Table 9** displays the 2020 ADT, 2050 forecasted ADT, average annual growth rate, and 28-year growth factor. The 28-year growth factor was applied to existing turning movement counts collected in 2022 to project 2050 baseline volumes for each movement. **Figure 7** displays the 2050 baseline turning movement volumes.

Table 9 – 2050 Baseline Daily Traffic Forecasts

Intersection	Roadway Segment	Existing Counts (2020)	2050 Forecast	Average Annual Growth Rate	28 Year Growth Factor
Midway Blvd	US 287 North of Midway	41,000	53,300	1.0%	1.280
	US 287 South of Midway	44,000	55,220	0.87%	1.243
CO 121 Ramps	At Intersection	20,000	21,800	0.30%	1.084
Nickel St	At Intersection	16,000	16,720	0.17%	1.0473
Main St	At Intersection	29,000	35,090	0.70%	1.196
Sheridan Blvd	West of Sheridan	29,000	32,480	0.40%	1.112
	East of Sheridan	35,000	41,300	0.60%	1.168
Lowell Blvd	At Intersection	41,000	48,995	0.65%	1.182

2050 Traffic Operations

A No Action alternative was created to simulate a "do nothing" scenario as a baseline for comparison to the Existing Conditions. **Table 10** and **Table 11,** found at the end of the report, display the morning and evening peak hour SimTraffic operations results including LOS and queuing information The 2050 peak hour traffic operations are summarized in **Figure 8** and **Table 12**. The level of service worksheets and SimTraffic outputs are contained in **Appendix B** for reference.

Eight (8) of the 13 study intersections experience an overall intersection LOS E or worse. Additionally, many individual movements display LOS E or worse and are projected to see large travel time delays throughout the network.

Table 12 - 2050 Intersection Level of Service (LOS) Results

Intersection	AM / PM Existing Peak Hour		AM / PM 2050 Peak Hour		Difference (sec/veh)
	LOS	Delay (sec/veh)	LOS	Delay (sec/veh)	
Midway Blvd / US 287	D / **E**	45.3 / **63.1**	**E / F**	**59.6 / 81.7**	14.3 / 18.6
Nickel Street / US 287	B / B	12.2 / 11.1	B / **E**	11.0 / **66.4**	1.2 / 55.3
Laurel Street /US 287	A / A	1.2 / 0.8	A / **F**	6.3 / **76.8**	5.1 / 76.0
Upham Street / US 287	B / C	16.6 / 32.8	**E / F**	**63.7 / 135.3**	47.1 / 102.5
Main Street / US 287	C / D	27.5 / 38.9	**E / E**	**72.0 / 62.6**	44.5 / 23.7
Village Square / US 287	A / A	3.4 / 7.7	C / A	23.4 / 7.2	20.0 / -0.5
Greenway Dr - Lamar St / US 287	A / C	9.5 / 15.3	D / C	35.4 / 23.1	25.9 / 7.8
Chase Street / US 287	B / B	14.4 / 14.9	B / B	15.3 / 14.0	0.9 / -0.9
Frontage Road / Chase Street	A / A	1.5 / 3.0	A / A	1.7 / 2.6	0.2 / -0.4
Sheridan Blvd / US 287	**E / F**	**61.5 / 99.8**	**F / F**	**90.0 / 127.2**	28.5 / 27.4
Vrain Street / US 287	B / D	18.4 / 41.6	C / **F**	20.2 / **102.2**	1.8 / 60.6
Bradburn Blvd / US 287	B / B	10.7 / 15.0	A / **E**	9.8 / **60.0**	-0.9 / 45.0
Lowell Blvd / US 287	C / C	27.0 / 24.7	D / D	38.4 / 42.8	11.4 / 18.1

By 2050, increased queues are expected if no improvements are made to the existing corridor and intersections. Many queue lengths are projected to block adjacent movements which will cause additional congestion along the corridor and are listed below. Queue lengths are summarized in **Table 13**.

- US 287 / Midway Blvd
- US 287 / Nickle St
- US 287 / Upham St
- US 287 / Main St
- US 287 / Chase St
- US 287 / Lowell Blvd

Vehicular Crash History and Analysis

SEH compiled and analyzed crash history along US 287 for a five-year period from January 1, 2015 to December 31, 2019. The crash data for the corridor was provided through the Safety Crash Data website page via CDOT as well as from the City, as collected from State Patrol and Broomfield County Sheriffs. The following provides a summary of the crash history analysis findings contained from the analyzed data. Full Crash Data records is found in **Appendix C**.

The five-year crash data was compiled and analyzed for both intersection and non-intersection related crashes along the US 287/120th corridor from Lowell Boulevard (mile marker 295) through Midway Boulevard (mile marker 298.5).

A summary of the Crash Data is shown in **Figure 9**.

Intersection-Related Crashes

US 287 / 120th & Lowell Boulevard

During the study period, 25 crashes were reported at or related to the intersection with 6 of those crashes involving injuries. There were no fatal crashes at the intersection during the study period. The LOSS for this intersection was a Level 2 for both total of crashes and severity of crashes.

Rear end was the most common collision type (19), followed by Sideswipe (3). Rear end collisions may simply reflect congestion at this intersection, but countermeasures including improved signal coordination or decision zone protection may be made.

US 287 / 120th & Perry Street

During the study period there were 9 crashes reported at the intersection with three involving injuries. There were no fatal crashes at the intersection during the study period. LOSS for this intersection is Level 2 for both total of crashes and severity of crashes.

Broadside (3) was the most common type of collision at the intersection followed by Approach Turn (2). These crashes may result as eastbound left turning vehicles have trouble finding an appropriate gap to make the movement across US 287/120th. Consideration of further access control may help mitigate. Two of the Broadside crashes occurred during times when trees in the median would have been full of foliage, this may be a contributing factor creating a sight distance obstruction.

US 287 / 120th & Bradburn Road

During the study period there were 13 crashes reported at the intersection with most of those crashes resulting in injuries (9). There were no fatal crashes at the intersection during the study period. LOSS for this intersection is Level 4 for both total of crashes and severity of crashes.

Rear End (12) is the most common type of collision at the intersection. Rear End collisions may simply reflect congestion at this intersection, but countermeasures including improved signal coordination or

decision zone protection may be made. The high rate of injury is also of concern and predominately occurred with the rear end crashes, accounting for 6 of the injury related crashes.

US 287 / 120th & Tennyson Way

During the study period there were 3 crashes reported at the intersection with 1 involving injuries. There were no fatal crashes at the intersection during the study period.

Broadside (1), Approach Turn (1) and Culvert/Headwall (1) were the crash types. These crashes do not form a pattern for mitigation.

US 287 / 120th & Vrain Street

During the study period there were 67 crashes reported at the intersection with 25 involving injuries. There were no fatal crashes at the intersection during the study period. LOSS for this intersection is Level 4 for both total of crashes and severity of crashes.

While Rear Ends (29) make up the majority of the crashes at this location, Sideswipes (9) were also high. Most concerning is the number of Approach Turn (12) and Broadside (10) collisions observed at this location. These types of crashes may reflect congestion, but many countermeasures may be taken to mitigate these types of severe crashes including: signal coordination, signal timing including the protected left turn only, left turn lane analysis for storage and number of lanes, and reflective tape around the backplates to give the signal heads more visibility. Approach Turn and Broadside type crashes occurred predominately in the eastbound and westbound directions.

US 287 / 120th & Wolff Street

During the study period there were 4 crashes reported at the intersection. There were no injury or fatal crashes at the intersection during the study period.

All 4 crashes were the Rear End crash types. Rear End crashes may simply reflect congestion at this intersection.

US 287 / 120th & Sheridan Boulevard

During the study period there were 87 crashes reported at the intersection with 17 involving injuries. There were no fatal crashes at the intersection during the study period. LOSS for this intersection is Level 4 for both total of crashes and severity of crashes.

While Rear Ends (56) make up the majority of the crashes at this location, and Sideswipes (10) were also in high numbers. Most concerning is the number of Approach Turn (5) and Broadside (17) observed at this location. These types of crashes may reflect congestion, but many countermeasures may be taken to mitigate these types of severe crashes including: signal coordination, signal timing including the protected left turn, left turn lane analysis for storage and number of lanes, and reflective tape around the backplates to give the signal heads more visibility. Broadside and Approach Turn crashes occurred predominately in the east and westbound directions, but also notably in the northbound direction as well. These improvements are recommended to be further looked at for the entire intersection for safety precautions.

US 287 / 120th & Chase Street

During the study period there were 56 crashes reported at the intersection with 18 involving injuries. There were no fatal crashes at the intersection during the study period. LOSS for this intersection is Level 4 for both total of crashes and severity of crashes.

Rear End (27) collisions represent the largest number of reported crashes at the intersection. Three other types of crashes were observed at the intersection as well; Approach Turn (12), Broadside (9) and Sideswipe (7). These types of crashes may reflect congestion, but many countermeasures may be taken to mitigate these types of severe crashes including: signal coordination, transferring from a protected/permissive left turn to protected only, and reflective tape around the backplates to give the signal heads more visibility, these would be most helpful for east and westbound directions as the majority of Approach Turn crashes occurred in these directions.

US 287 / 120th & 1st Avenue / Jefferson Place

During the study period, there were 0 crashes reported at the intersection.

US 287 / 120th & Ash Street

During the study period, there was 1 recorded crash at the intersection. The crash resulted in injury and involved a Bicycle. LOSS for this intersection is Level 1 for both total of crashes and severity of crashes.

US 287 / 120th & Lamar Street / Greenway Drive

During the study period there were 30 crashes reported at the intersection with 8 involving injuries. There were no fatal crashes at the intersection during the study period. LOSS for this intersection is Level 2 for both total of crashes and severity of crashes.

Rear End (13) collisions represent the largest number of reported crashes at the intersection. Three (3) other types of crashes were observed at the intersection as well; Approach Turn (5), Broadside (4) and Sideswipe (3) and collision with a Bicycle (3) and a Sign (2). These types of crashes may reflect congestion. Countermeasures may be taken to mitigate these crashes include transferring from a protected/permissive left turn to protected only along US 287/120th. Noteworthy at this location are the 3 Bicycle related crashes as well.

US 287 / 120th & Villager Square

During the study period, there were 0 crashes reported at the intersection.

US 287 / 120th & Main Street / Pierce Street

During the study period there were 56 crashes reported at the intersection with 13 involving injuries. There were no fatal crashes at the intersection during the study period. LOSS for this intersection is Level 3 for total crashes and Level 4 for severity of crashes.

Analysis shows that Rear End (35) crashes make up the majority of incidents at this location. This may be the result of congestion at this intersection. Other noteworthy crash types include Broadside (7) and Approach Turn (8). Some possible countermeasures may include adding backplates to the Main Street/Pierce Street signal heads as well as reflective tape on all signal heads. Consideration for protected left turns may also be helpful especially in the north and southbound directions as theses accounted for the majority of Approach Turn crashes.

US 287 / 120th & Quay Street

During the study period there were 5 crashes reported at the intersection. There were no injury or fatal crashes at the intersection during the study period. LOSS for this intersection is Level 3 for total of crashes and Level 2 severity of crashes.

Analysis shows that there were Rear End (2) crashes and Broadside (3) crash incidents at this location. The Broadside crashes may be the result of inability to find an appropriate gap.

US 287 / 120th & Reed Street

During the study period there were 7 crashes reported at the intersection with 1 involving injury. There were no fatal crashes at the intersection during the study period. LOSS for this intersection is Level 2 for both total of crashes and severity of crashes.

All 5 crashes were of different types, no existing pattern was evident. The crash types: Rear End, Sideswipe, Approach Turn, Sign, Other Object, and Overtaking Turn.

US 287 / 120th & Saulsbury Street

During the study period there was 3 crashes reported at the intersection. This included Sideswipe (2) and Broadside (1) crashes. There were no injury or fatal crashes at the intersection during the study period. LOSS for this intersection is Level 3 for both total of crashes and severity of crashes.

US 287 / 120th & Teller Street

During the study period there were 9 crashes reported at the intersection with 3 involving injuries. There were no fatal crashes at the intersection during the study period. LOSS for this intersection is Level 3 for total of crashes and Level 2 severity of crashes.

Broadside (5) collisions represent the largest number of reported crashes at the intersection. Two (2) other types of crashes were observed at the intersection as well: Rear End (3) and Sideswipe (1). Broadside crashes come from vehicles heading northbound. At this intersection US 287/120th has a curve. An analysis of the sight distance and any resulting mitigating actions may help in lessening the frequency of Broadside crashes at this location.

US 287 / 120th & Emerald Street

During the study period there was 1 Sideswipe crash reported at the intersection. There were no injury or fatal crashes at the intersection during the study period. LOSS for this intersection is Level 3 for both total of crashes and severity of crashes.

US 287 / 120th & Upham Street

During the study period there were 10 crashes reported at the intersection with 3 involving injury. There were no fatal crashes at the intersection during the study period. LOSS for this intersection is Level 1 for both total of crashes and severity of crashes.

Seven (7) crashes were of Rear Ends, and the other 2 involved a Concrete Barrier and a Barricade. This pattern may be the result of congestion near the area approaching the CO 128 and US 287/120th split.

US 287 / 120th & Vance Street

During the study period there were 4 crashes reported at the intersection. There were no injury or fatal crashes at the intersection during the study period. LOSS for this intersection is Level 4 for total of crashes and Level 2 severity of crashes.

Two (2) crashes were of Rear Ends, and the other 2 were Sideswipes.

US 287 / 120th & 120th Avenue / Webster Street

During the study period there was 1 Sideswipe crash reported at the intersection. There were no injury or fatal crashes at the intersection during the study period.

US 287 / 120th & Hemlock Way

During the study period there were 4 crashes reported at the intersection with 2 involving injuries. There were no fatal crashes at the intersection during the study period. LOSS for this intersection is Level 4 for total of crashes and Level 2 for severity of crashes.

All 4 crashes were of different types, no existing pattern was evident. The crash types were; Sideswipe, Approach Turn, Broadside, and Sign collision.

US 287 / 120th & Laurel Street

During the study period there were 7 crashes reported at the intersection. There were no injury or fatal crashes at the intersection during the study period. LOSS for this intersection is Level 3 for total of crashes and Level 2 for severity of crashes.

Five (5) crashes with 4 different crash types, no existing pattern was evident. The crash types were; Rear End (2) Sideswipe (2), Approach Turn, Broadside, and Sign collision.

US 287 / 120th & Marble Street

During the study period there were 3 crashes reported at the intersection including 1 injury. There were no fatal crashes at the intersection during the study period. LOSS for this intersection is Level 2 for both total of crashes and severity of crashes.

The 3 crashes consisted of Rear End (1) and Broadside (2). No crash pattern was evident.

US 287 / 120th & Nickel Street / Loop Ramp On

During the study period there were 69 crashes reported at the intersection with 17 involving injuries. There were no fatal crashes at the intersection during the study period. LOSS for this intersection is Level 4 for total of crashes and Level 3 for severity of crashes.

While Rear Ends (26) make up the majority of the crashes at this location. Most concerning is the number of Approach Turn (14) and Broadside (18) observed at this location. These types of crashes are considered severe with a high risk for injury and high potential for mitigation opportunities. Countermeasures may be taken to mitigate these types of severe crashes including: signal coordination, signal timing including protected left turn only, left turn lane analysis for storage and number of lanes, and reflective tape around the backplates to give the signal heads more visibility. It is also noted that just west beyond this intersection are the on ramps for Wadsworth Parkway.Representation of Broadside crashes were predominately in the north and westbound directions, further, Approach Turn crashes occurred in the west and eastbound directions for the larger portion of those crashes.

US 287 / 120th & CO 128 On Ramp Merge

During the study period there were 9 crashes reported at the intersection. There were no injury or fatal crashes at the intersection during the study period.

Analysis shows that Rear End (8) crashes make up the majority of incidents at this location. This may be the result of congestion at this intersection as well as the merging movements.

US 287 / 120th & CO 128 Junction

During the study period there were 2 crashes reported at the intersection with 1 involving injury. There were no fatal crashes at the intersection during the study period.

Analysis shows that Rear End (2) crashes made up the entirety of incidents at this location. This may be the result of congestion at this intersection as well as the merging movements.

US 36 & Slip Ramp & Midway Boulevard

During the study period there were 104 crashes reported at the intersection with 24 involving injuries. There were no fatal crashes at the intersection during the study period. LOSS for this intersection is Level 4 for both total of crashes and severity of crashes.

Rear Ends (70) by far make up the majority of the crashes at this location. This trend may be a result of heavy congestion in the vicinity of the intersection, including the addition of volume from the Wadsworth Parkway off ramps. In addition, a large number of Sideswipe (10), Approach Turn (11) and Broadside (11) crashes were documented. Consideration for protected left turn is recommended. Broadsides at the slip ramp and other crashes at that location or northbound left turns and merging traffic countermeasures should be considered as well. Approach Turn crashes were predominately in the westbound direction.

Non-Intersection Segment Related Crashes

US 287 / 120th

During the study period, 270 non-intersection crashes were reported in the study area along US 287/120th between Lowell Street and Midway Boulevard. Thirty-three (33) crashes involved injuries. There were no fatal crashes along US 287/120th during the study period.

Rear End (168) crashes represent the largest percentage of crash types along the corridor. Rear End crashes are typically associated with congestion and stopped traffic at intersections. Additionally, most crashes were recorded in the proximity of surrounding intersections which may indicate congestion or human error with recording the crash as non-intersection related. Rear ends occurring near intersections include Lowell Boulevard, Perry Street, Bradburn Street, Sheridan Boulevard, Pierce/Main Street, the loop and slip ramps as wells Midway Boulevard.

Sideswipe (64) crashes were also highly represented in the data. With multi-lane facilities, this is a common occurrence as vehicles maneuver to switch lanes. Sideswipe patterns occur near the slip ramp near Midway Boulevard and the areas near Saulsbury and Teller Streets. Lesser, but noted patterned area includes Vrain Street.

Pedestrian and Bicycle Conditions

The study area on US 287/120th includes a variety of bicycle and pedestrian facilities to serve non-motorized travel and provide access to transit. Generally, sidewalks, and off-street trails provide access along the corridors and within the study area. There are also on-street bicycle lanes along Nickel Street.

The condition of the bicycle and pedestrian facilities was field reviewed and documented for US 287. The items measured during the field review were compared with the United States Access Board's Proposed Right-of-Way Accessibility Guidelines (PROWAG) and were also utilized to conduct the analyses outlined below.

The Pedestrian LOS for intersections along the three roadways was obtained from Synchro (Version 11) traffic analysis software using the HCM 6th Edition methods (Highway Capacity Manual 6th Edition, Transportation Research Board, Washington, DC, 2010.). Additionally, data was obtained to assess the Bicycle Level of Traffic Stress and the Bicycle LOS along Nickle Road, which includes on-street bicycle lanes.

US 287/120th Pedestrian and Bicycle Connectivity

Figure 10 illustrates the existing pedestrian and bicycle network in the immediate study area. The primary connections in the area are made up of existing sidewalks and trails along the corridor. There are some short segments of attached sidewalks. Sidewalk gaps were observed in multiple locations within the area as well.

Figure 10 also highlights the transit stops within the study area as well as the nearby key land uses such as: residential neighborhoods, the Downtown commercial area, schools, greenways, and recreational or natural areas.

Pedestrian crossing area at US 287 and Sheridan Blvd.

Pedestrian and Bicycle Facility Conditions

As previously explained in the **Roadway Network Conditions** section of this report, field visits were completed in March 2022 to document existing roadway characteristics and conditions within the study area. This documentation included collecting data and noting general conditions of the existing pedestrian and bicycle facilities along each corridor. More specifically, the following information was collected:

- Pedestrian Curb Ramps:
  - General layout
  - Running slope of ramp
  - Cross slope and running slope of landing areas
  - Ramp widths that appeared to be excessive
  - Presence of truncated domes
  - Location of utility structures
- Facilities at Signalized Intersections:
  - Approximate location of pedestrian push buttons in relation to the curb ramp landing area and crossing area
  - Pedestrian crossing distances
  - Type of pedestrian signal indication (e.g. countdown signal)
  - Timing of pedestrian signal indications (e.g.walk interval, change interval)
- Facilities along Pedestrian Access Route:
  - Width of pedestrian access route
  - Vertical surface discontinuities over ½-inch
  - Running slope of pedestrian access route that appeared to be excessive
  - Adverse slopes of adjacent planting area
  - Pedestrian facilities for adjacent at-grade rail crossings
  - Potential maintenance issues (e.g. cracking, spalling, and settlement of concrete facilities)

Curb ramp with PROWAG compliance issues at US 287 and Chase St.

Figure 10 depicts an example of the information collected during the field visits. This information includes: type/location of pedestrian and bicycle facilities, potential compliance issues with PROWAG, and observed moderate/major maintenance issues. **Appendix D** shows all curb ramp information.

Overall, the majority of PROWAG compliance issues observed within the study area were due to steep curb ramp slopes, lack of level landing areas, and excessive vertical surface discontinuities. Additionally, approximately 55% of the existing curb ramps within the study area are diagonal curb ramps. Although diagonal curb ramps comply with PROWAG requirements in extreme circumstances, they are not the CDOT preferred configuration.

Diagnal Curb Ramp at US 287 and Main St.

Most of the maintenance issues identified at US 287 and Chase Street (**Figure 10)** relate to moderate/major concrete cracks, spalling, and settlement along the pedestrian access route. Although additional minor maintenance issues were observed, only issues that may impact pedestrian and bicycle travel along the corridor were identified for the purpose of this report.

US 287/120th

US 287 includes sidewalks and off-street trails along the study corridor for bicyclists and pedestrians to share. There are no bicycle lanes anywhere within the project study area along US 287/120th. The four-lane divided roadway includes left and right turn lanes at every intersection. Crosswalks are only marked at signalized intersections. The percentage of curb ramps on the corridor that are oriented diagonally is 38%. The majority of the PROWAG compliance and maintenance issues are concentrated at the intersections.

There are on-street bicycle lanes on Nickel St, including a Bicycle Box on the north leg of US 287 and Nickel St. However, there are no receiving bicycle lanes on the south side on the intersection because of the railroad crossing. Midway Blvd and US 287 have shared bicycle lanes east/west across the intersection with “sharrow” lane markers present. On-street bicycle lanes exist on Commerce Street from Nickel Street.

Pedestrian and Bicycle Operations

Bicycle and pedestrian operations along the corridor were analyzed to assist with the identification of system gaps and potential improvement options. **Figure 11** summarizes the analysis results for pedestrians, which are also described in greater detail below. **Figure 11** also shows the volume of pedestrians and bicyclists observed during the AM and PM peak hours during the project data collection in April 2022. With no on-street facilities on US 287, the operations for people bicycling were assessed utilizing the Bicycle Level of Traffic Stress methodology at the segment level. This methodology helps identify how well a facility serves people bicycling; in particular, the interested but concerned group of bicyclists. This is described in more detail on the following page.

Pedestrian Intersection LOS

Crossing treatments at US 287 and Midway Blvd.

The pedestrian intersection conditions analysis in this study uses the methodology for evaluating Pedestrian Level of Service (PLOS) at signalized intersections established in the *Highway Capacity Manual 2010*. All eleven signalized intersections along the study corridors were analyzed. Unsignalized intersections were not included in the analysis. The analysis was based on the following traffic characteristics: vehicle demand flow rate based on weekday peak-hour volumes, right-turn-on-red flow rate, permitted left-turn flow rate, and posted speed limit. Signal control data was also analyzed, including the duration of the pedestrian walk setting, the pedestrian clearance interval (flash don't walk), the cycle length, phase duration, the yellow change interval, and the red clearance interval.

The Synchro model used these character inputs to calculate LOS factors for vehicle counts, pedestrian delay, vehicle speed, vehicle volumes, and the cross-section characteristics. Using these factors, each crossing at the intersection was assigned a PLOS score and grade. **Table 13** summarizes the PLOS thresholds used in this analysis.

Table 13 - Pedestrian Level of Service (LOS) Criteria

LOS	Score
A	Less than 1.5
B	1.5 - 2.5
C	2.5 - 3.5
D	3.5 - 4.5
E	4.5 – 5.5
F	Greater than 5.5
Source: Highway Capacity Manual, 2010	

Figure 11 displays the results for the eleven signalized intersections, reporting the Pedestrian LOS (PLOS) score for each street crossing. The lowest PLOS score of D was found at several crossings and the highest PLOS score was B, which was typically found on one or both of the side street crossings of US 287. The mainline crossings of US 287 were typically in the PLOS D and C range, due to the length of the crossing and number of traffic lanes pedestrians need to traverse.

Bicycle Level of Traffic Stress Analysis

The Bicycle Level of Traffic Stress methodology is based on research which has demonstrated that bicyclists in the United States have varying levels of tolerance for traffic stress when bicycling; thus the method is intended to gauge the ease or stressfulness of bicycling along a particular bicycle route or roadway segment. The method classifies road segments and bicycle facilities based on how comfortable people with different confidence levels are when bicycling and when interacting with motor vehicles. The methodology was established by Mekuria, et al, in *Low- Stress Bicycling and Network Connectivity* for the Mineta Transportation Institute.

There are four categories of the Level of Traffic Stress measure (LTS), with LTS 1 being the least stressful and LTS 4 being the most stressful. **Table 14** describes the LTS categories used to analyze the bicycle facilities along US 287.

Table 14 - Level of Traffic Stress (LTS) Categories

LTS 1	Presenting little traffic stress and demanding little attention from cyclists, and attractive enough for a relaxing bicycle ride. Suitable for almost all cyclists, including children trained to safely cross intersections. On links, cyclists are either physically separated from traffic, or are in an exclusive bicycling zone next to a slow traffic stream with no more than one lane per direction or are on a shared road where they interact with only occasional motor vehicles (as opposed to a stream of traffic) with a low-speed differential. Where cyclists ride alongside a parking lane, they have ample operating space outside the zone into which car doors are opened. Intersections are easy to approach and cross.
LTS 2	Presenting little traffic stress and therefore suitable to most adult cyclists but demanding more attention than might be expected from children. On links, cyclists are either physically separated from traffic, or are in an exclusive bicycling zone next to a well-confined traffic stream with adequate clearance from a parking lane or are on a shared road where they interact with only occasional motor vehicles (as opposed to a stream of traffic) with a low-speed differential. Where a bicycle lane lies between a through lane and a right-turn lane, it is configured to give cyclists unambiguous priority where cars cross the bicycle lane and to keep car speed in the right-turn lane comparable to bicycling speeds. Crossings are not difficult for most adults.
LTS 3	More traffic stress than LTS 2, yet markedly less than the stress of integrating with multilane traffic, and therefore welcome to many people currently riding bicycles in American cities. Offering cyclists either an exclusive riding zone (lane) next to moderate-speed traffic or shared lanes on streets that are not multilane and have moderately low speed. Crossings may be longer or across higher-speed roads than allowed by LTS 2 but are still considered acceptably safe to most adult pedestrians.
LTS 4	A level of stress beyond LTS3.

On-street bicycle lane along Nickel St.

The criteria or factors that impact LTS are intended to be readily obtained without arduous data collection or calculation efforts. Factors include number of lanes, vehicular speed, width of bicycle lane, and presence of on-street parking. A key to this methodology is that several low-stress links along any corridor or route cannot compensate for a high-stress link along the same route. It operates on the weakest link principle; the worst score is the one assigned for the whole route. This is valuable in that it identifies the "weak links" or higher stress links in a bicycle network which keep people from using certain routes. For example, a bicyclist with a stress tolerance of LTS 2 would be inclined to avoid routes with segments of LTS 4 regardless of the existence of LTS 2 segments, since it would still be required that they bicycle on the higher stress segments for a trip.

Typically, the measure is used at the network planning level to identify gaps in low-stress connectivity that can be addressed through network plans and annual budgets or with special projects. Since the stress of a route is determined by its most stressful link, rather than the average, the tool is useful in the process of completing networks and increasing the mode share of bicyclists. This also provides benefit in drawing attention to gaps in a bicycle facility network and identifying locations along a corridor or network where improvements have been implemented.

US 287/120th

The US 287/120th Study Corridor includes discontinuous shared use paths and sidewalks. When reviewing by segment, most of the corridor is at LTS 4, representing the highest level of stress due to a lack of any bicycle facilities along most of the corridor. **Figure 12** illustrates the LTS on both sides of the corridor for US 287, showing in red the segments with LTS of 4. Where there is a ten-foot wide shared use path, the corridor has more comfortable, lower stress facilities for bicycling as illustrated on Figure 12 in green with an LTS of 1.

Along the north side of the segment of US 287 between Ash Street and Tennyson Way a continuous shared use path provides low-stress connectivity for a short distance along the corridor (LTS 1). This facility provides access between several retail and restaurant land uses in this area.

The segment along the south side of US 287 between Sheridan Boulevard and Lowell Boulevard provides a comfortable, low stress bicycle facility. **Figure 12** shows that this segment also functions at LTS 1. This segment has even greater separation from the traffic along US 287 due to the presence of the creek, landscape features, and trees which provide additional buffer and a more pleasant experience for people traveling along this portion of the corridor to access the retail and residential area to the south.

Due to the lack of continuous facilities on either side of the corridor, and applying the weakest link principle, the US 287 project corridor has an overall LTS 4. However, understanding the presence of network gaps as well as the locations with lower stress facilities informs the planning process and officials that opportunities to redevelop or implement improvements exist. There is opportunity to connect these facilities and provide increased network permeability.

The details of the rating are displayed and LTS are displayed on **Figure 12**.

Pedestrian/Bicycle Crash History and Analysis

Pedestrian and bicycle related crashes are significant due to the higher probability of injury or fatality. Several intersections along the study corridor experienced pedestrian and bicycle related crashes. **Figure 13** displays the location and direction of each pedestrian and bicycle related crash that was recorded during the five-year period from January 1, 2015 to December 31, 2019.

A majority of pedestrian and bicycle related crashes were recorded at Lamar Street / Greenway Drive and at Nickel Street. Congestion and lack of driver awareness may be causes of the crashes. Other intersections that experienced crashes were Vrain Street, Chase Street, Ash Street, and Main Street. Nearly all of the crashes resulted in an injury. Pedestrian crossing times may also be a factor in some of the crashes since adequate crossing time is not provided at all of the problematic intersections.

Transit Service Conditions

One RTD route (Route 120: 120th Avenue / Brighton) operates within the study area. Route 120 is a regional service route operating with the RTD district mostly along 120th Avenue from Broomfield to Brighton. Full details regarding this transit route can be found in **Table 15**.

Table 15- Transit Route Service Summary

Route	Operator	Days of Service	Service Duration[1]	Trips[2]	Time of Operation[3]	Frequency
324	RTD	Weekday	17.5 hours	48 total	6:00 AM – 11:30 PM	EB - 30 min, WB – 60 min
		Saturday	15 hours	30 total	6 AM – 9 PM	60 min
		Sunday				

[1] Rounded to the nearest 30 minute interval.

[2] The total number of trips includes both directions.

[3] The time of operation includes both directions rounded to the nearest 15 minute interval based on the first stop in the route.

Transit Ridership

Figure 14 shows the total boardings (in both directions) for stops located within the study area and **Figure 15** shows the stop locations withing the study area. The eastbound stop of US 287/120th and Sheridan Boulevard experiences the most boardings, and the fewest boardings were experienced at 122nd Avenue/Ash Street and Main Street/Greenway Drive. In 2021, the westbound stop of 124th Avenue/Sheridan Boulevard experienced the most boardings, and the fewest boardings were experienced at 126th Avenue/Lowell Boulevard. Years 2019 and 2021 were chosen for comparison of pre-Covid and at the time most recent Covid timeframe boardings. RTD provided boarding information is found in **Appendix E.**

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR, EBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary	
HCM 6th Ctrl Delay	90.6
HCM 6th LOS	F

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary	
HCM 6th Ctrl Delay	93.4
HCM 6th LOS	F

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR, EBR, WBR, SBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary	
HCM 6th Ctrl Delay	109.1
HCM 6th LOS	F

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary	
HCM 6th Ctrl Delay	72.0
HCM 6th LOS	E

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR, EBR, WBR, SBR] is excluded from calculations of the approach delay and intersection delay.

Environmental Constraints Memorandum

Date: July 29, 2022

To: Craig Burgess, Short, Elliot & Hendrickson

From: Benjamin Burns, Pinyon Environmental, Inc.

Subject: **US 287/120th Avenue Multimodal and Safety Study**

1. Environmental Constraints Introduction

The City and County of Broomfield is considering safety, capacity, and multimodal improvements along US 287 (and SH 128/120th Avenue) between the US 287/Midway Boulevard and Alter Street connection, to the eastern terminus at the Lowell Boulevard intersection with US 287. This project will plan for future improvements that will positively impact corridor safety, roadway capacity, and operations. The study will evaluate traffic congestion, safety, travel lane capacity needs, travel-time reliability, transit operations, transit options, and transit-related infrastructure improvements on the corridor to facilitate trip reliability and reduced delay for various modes of travel. As any alternative designs that result from this study will likely utilize federal funds, the Colorado Department of Transportation (CDOT) is participating in the study, with oversight on the existing conditions analysis and future alternative development.

Pinyon Environmental, Inc. (Pinyon), is assessing and analyzing the environmental constraints in the study area. Pinyon's constraints analysis will deliver a high-level understanding of existing environmental conditions for environmental topics including air quality, noise, hazardous materials, biological resources, cultural resources, non-historic Section 4(f) resources, and Section 6(f) resources. This analysis will consist of desktop and field surveys along with state and federal database searches to identify environmental resource considerations in the study area. The constraints analysis aims to be broad enough to encompass the variety of potential alternatives that the design team may end up developing for the corridor. This project will include coordination with CDOT to ensure that the study area and environmental scope of work will sufficiently inform the National Environmental Policy Act (NEPA) process for future design concepts.

2. Project Location

This project is located in the City and County of Broomfield, Colorado, bordering the City of Westminster on the south side of 120th Avenue. The main roadway being analyzed in this study is US 287/120th Avenue from the intersection of US 287 and Midway Boulevard to the intersection of 120th Avenue and Lowell Boulevard; however, the study area was expanded during the analysis to include Nickel Street – from US 287 to West 3rd Avenue – and SH 138 – from US 287 to SH 121. The study's roadways are illustrated in ***Figure 1*** below.

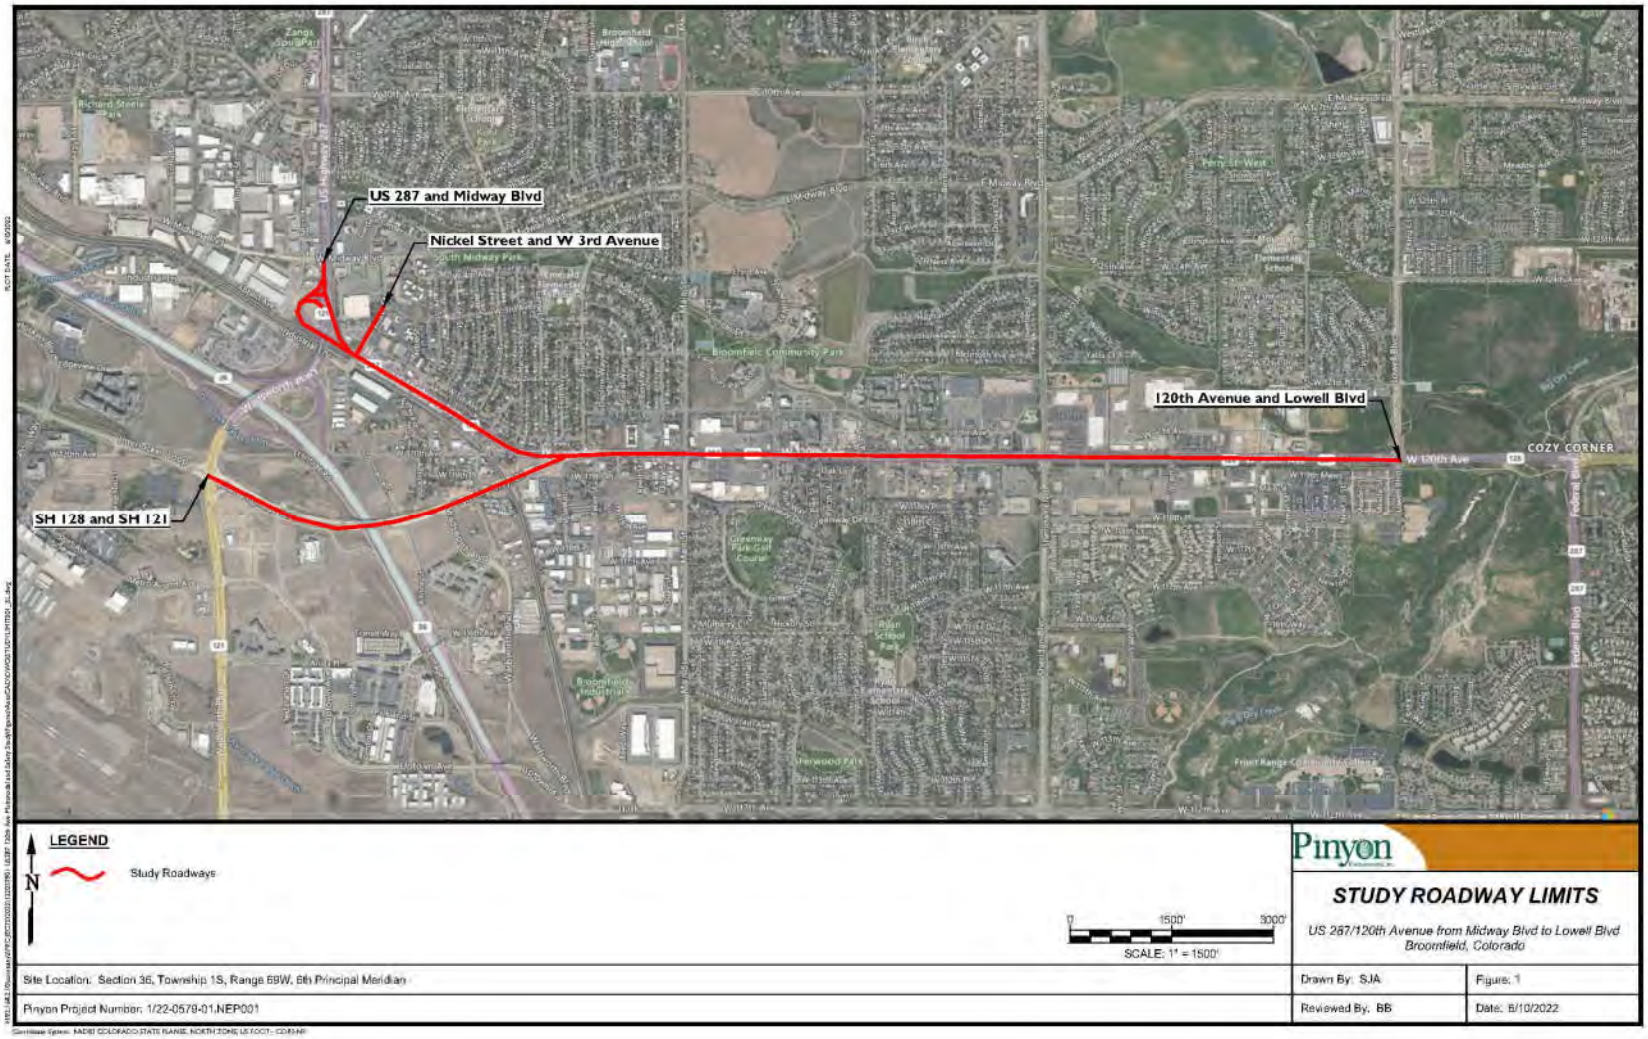

Figure 1: Study Roadway Limits

3. Environmental Constraints Analysis Methodology

Pinyon evaluated the study area to assess the environmental conditions using field visits, readily available Geographic Information Systems (GIS) data, Google Earth, and desktop reviews. This Environmental Constraints Analysis covers a variety of environmental resource areas, including air quality, noise, hazardous materials, biological resources, cultural resources, and Section 4(f) and 6(f) considerations. The following sections provide details on these topics; in some cases, where noted, detailed technical evaluations have been conducted and are presented under separate cover as referenced.

4. Air Quality

4.1 Introduction and Regulatory Background

The Clean Air Act requires the EPA to set National Ambient Air Quality Standard (NAAQS) for seven criteria pollutants: carbon monoxide (CO), ozone (O_3), nitrogen dioxide (NO_2), sulfur dioxide (SO2), particulate matter less than 10 micrometers in diameter (PM_{10}), particulate matter less than 2.5 micrometers in diameter ($PM_{2.5}$), and lead (Pb) (EPA, 2021). NAAQS for each criteria pollutant were determined based on the effects of each pollutant on public health and welfare and are updated as needed to reflect scientific advancements. Compliance with the NAAQS in Colorado is enforced by the Colorado Department of Public Health and Environment (CDPHE), and transportation projects must conform to these standards. Geographic areas that violate a NAAQS for a criteria pollutant are considered "nonattainment" areas for that pollutant, while areas that are below standards are considered "attainment" areas. When an area has exited nonattainment, it must show values that meet the NAAQS for a 20-year period, which are considered "maintenance" areas.

Guidelines for project-level quantitative analyses for pollutants are provided in CDOT's Air Quality Project Level Analysis Guidance (AQ-PLAG) document (CDOT, 2019a). The AQ-PLAG details requirements for quantitative analyses such as hot spot analysis for project-level conformity and projects of air quality concern (POAQC) designation, for projects in maintenance areas. Additionally, EPA has guidance for hot-spot modeling guidance as well, such as the *PM Hot-Spot Guidance: Transportation Conformity Guidance for Quantitative Hot-spot Analyses* in PM2.5 and PM10 Nonattainment and Maintenance Areas, along with Guidelines for Modeling Carbon Monoxide from Roadway Intersections. Finally, FHWA also has guidance documents, including *Federal Highway Administration (FHWA) Carbon Monoxide (CO) Categorical Hot-Spot Finding*. A project is determined to need hot spot modeling for CO in maintenance areas during the 20-year conformity period based on various criteria in the AQ-PLAG. A project is determined to be a POAQC through scoping coordination with CDOT, in which the volume of diesel vehicles and the potential increase in diesel vehicles are evaluated among other considerations. These data are obtained through the traffic analysis completed for the project area.

Colorado Senate Bill 21-260 signed in June 2021 requires regionally significant transportation projects, as defined by CDOT, to conduct emissions modeling for air pollutants for the planned project and provide monitoring of criteria pollutants prior to construction. Additional reporting and plan requirements also may apply to the regionally significant transportation project. Additionally, Colorado Senate Bill 43-1-128, Section 4 requires certain projects to perform air quality monitoring for PM prior to and during construction, along with the development and implementation of a PM mitigation plan.

Finally, the Transportation Commission passed amendments to two Code of Colorado Regulations (CCR) 601-22 requiring CDOT and metropolitan planning organizations (MPO) to meet greenhouse gas (GHG) reduction requirements through their regional transportation planning. The MPOs and CDOT, through modeling, must demonstrate that their regionally significant transportation projects can meet the GHG reductions by 2025, 2030, 2040, and 2050. Then, project level analyses may need to be conducted to demonstrate if inclusion of the project in regional transportation planning modeling will be required.

4.2 Project Area Air Quality Status

The project area is located within the Denver Metro/North Front-Range ozone nonattainment area, and the Denver Metro PM_{10} maintenance area. The project area is still technically in the Denver-Boulder CO maintenance area, but the 20-year conformity requirements ended in January 2022, meaning conformity analyses are no longer required for CO.

In regard to Senate Bill 21-260, there is no exact guidance on defining a regionally significant transportation capacity project under Colorado Sente Bill 21-260 at this time. The same applies to the requirements under Senate Bill 43-1-128.

The project will take place within the DRCOG MPO, which has GHG reduction targets starting in 2025.

4.3 Analyses Requirements

The type of NEPA study this project triggers is unknown at this time, but if an Environmental Assessment (EA), rather than a Categorical Exclusion (CatEx) is required, there would be quantitative requirements for mobile source air toxics (MSATs), and requirements under current guidance for qualitative analysis of GHGs. Additionally, depending on if the project is classified as regionally significant, there could be analyses required such as MOVES emissions modeling, MSATs, and GHGs.

The project will not be required to complete CO hot spot modeling due to the expiration of transportation conformity requirements within the Denver-Boulder CO Maintenance area on January 14, 2022. Depending on final project details, an analysis of POAQC applicability, or PM_{10} modeling, should be completed due to the project being in the PM_{10} maintenance area. POAQC applicability would be decided through scoping with CDOT and could be triggered through the existing volume of diesel vehicles, and the predicted increase in diesel vehicles in the project area among other project details. It should be noted that conformity requirements for the PM_{10} maintenance area expire on 10/16/2022.

Additionally, based on timing, this project may be modeled for emissions by the DRCOG MPO and CDOT for the regional transportation plan or other planning document. At such time, it is possible that project-level guidance will be released outlining steps to conduct GHG analyses.

5. Noise

5.1 Introduction

The regulations that govern highway traffic noise for Federal-aid and Federal action projects are contained in Part 772 of Title 23 of the Code of Federal Regulations (23 CFR 772), which is the Federal highway noise standard. The Noise Analysis and Abatement Guidelines (NAAG) set forth by CDOT describe the CDOT policy and program to implement 23 CFR 772 termed Type I, and Type III projects. The level of project "type" then determines what degree of noise analysis must be performed, along with appropriate noise abatement recommendations as a result of the analysis. The initial steps of a noise analysis include

identification of potential noise-sensitive receptors that would be impacted by a proposed project. Table 1 in the NAAG details the different types of potential noise-sensitive receptors by activity category.

5.2 Methodology

All potential noise receptors within the 0.25-mile buffer zone have been evaluated according to the Activity Categories listed in Table 1 of the NAAG.

5.3 Findings

Within the study area, there are a mix of Category B (residential), Category C (includes areas with exterior use areas), Category D (areas with interior noise concerns), and Category E (hotels, offices, and restaurants with exterior use areas) noise receptors. Most receptors in the study area fall under Category B. Category G (undeveloped, unpermitted lands) noise receptors were not identified within the study area buffer zone at the time of this environmental constraints analysis; however, further analysis may be warranted on a select few properties, detailed below.

Additionally, a noise wall was found within the study area bordering the northeast side of US 287 from Laurel Street to 120th Avenue's intersection with Emerald Street. This is a continuous brick wall that does not match the typical style of CDOT noise walls; however, it appears to serve the residences behind it by reducing traffic noise from the roadway. This noise wall is noted in *Figure 2.1* in yellow.

Specific locations of receptors – or general high-density areas of receptors – are outlined below in ***Figures 2.1 and 2.2***.

Potential Category B

Several areas with high densities of residential noise receptors were located within the 0.25-mile buffer zone. Notable groups of residential noise receptors that directly border the study roadways are:

- North side of US 287/120th Avenue, between Laurel Street and Emerald
- South side of US 287/120th Avenue, between Greenway Drive North/Lamar Street to Ash Street

Potential Category C

Several properties with exterior use areas were identified within the 0.25-mile buffer zone, including:

- Greenway Park Golf Course, 110 Greenway Drive, Broomfield, CO 80020
- Bradburn Village Green, 11798 Perry Street, Westminster, CO 80031
- UC Health Broomfield Hospital, 11820 Destination Drive, Broomfield, CO 80021
- Hearing HealthCare Centers, 210 East 1st Avenue #102, Broomfield, CO 80020

Potential Category D

Various properties within the study area that rely on a degree of internal noise for their operations and may have said operations negatively impacted by additional external noise are as follows:

- Potential Government/non-profit institutional structures
    - US Postal Service office 280 E 1st Avenue

  - Broomfield Birth and Death Certificates, Broomfield Workforce Center (Broomfield Health and Human Services – City Government), 100 Spader Way
  - North Metro Fire Rescue Headquarters, 101 Spader Way
- Other
  - Monkton Guitars, 1505 W 1st Avenue
  - Spectra Centers, 7205 W 120th Avenue (possible preschool)
  - Beautiful Savior Lutheran School, 6995 W 120th Avenue
  - Cadence Academy Preschool, 900 E 1st Avenue
  - Goddard School of Westminster, 4147 Main Street
  - The Academy of Charter Schools, 11800 Lowell Boulevard
  - Victory Montessori, 11777 Sheridan Boulevard
  - Primrose School at Torrey Peaks, 5483 W 118th Place

Potential Category E

Commercial properties that may have outdoor seating/dining areas intended for "frequent outdoor use" were identified within the 0.25-buffer zone, including:

- Infinitus Pizza PIE, 145 Nickel Street
- Twan Shine Thai Food, 155 Nickel Street
- 3 Margaritas, 6896 W 120th Avenue
- Scalzotto, 88 Lamar Street #110
- Ted's Montana Grill, 11967 Bradburn Boulevard
- Early Bird Restaurant, 11940 Bradburn Boulevard #400
- Villager Square, 6570 W 120th Avenue*

**NOTE: This property is a strip mall that does not necessarily qualify as a noise sensitive receptor itself, but may have outdoor seating areas associated with the various businesses within (e.g., Durbar Nepalese and Indian Bistro, 6590 W 120th Avenue, Broomfield, CO 80020)*

Potential Category G

As mentioned above, Category G land use refers to undeveloped, unpermitted land. For the purposes of this high-level noise analysis, the following potential properties have been noted but have not been confirmed as unpermitted. This would be something to consider once the design is finalized:

- Plot of undeveloped land adjacent to Victory Church, 11777 Sheridan Boulevard, Westminster, CO 80020
- Undeveloped land on 120th Avenue adjacent to Villagio of Broomfield, 11952 Gray Street, Broomfield, CO 80020

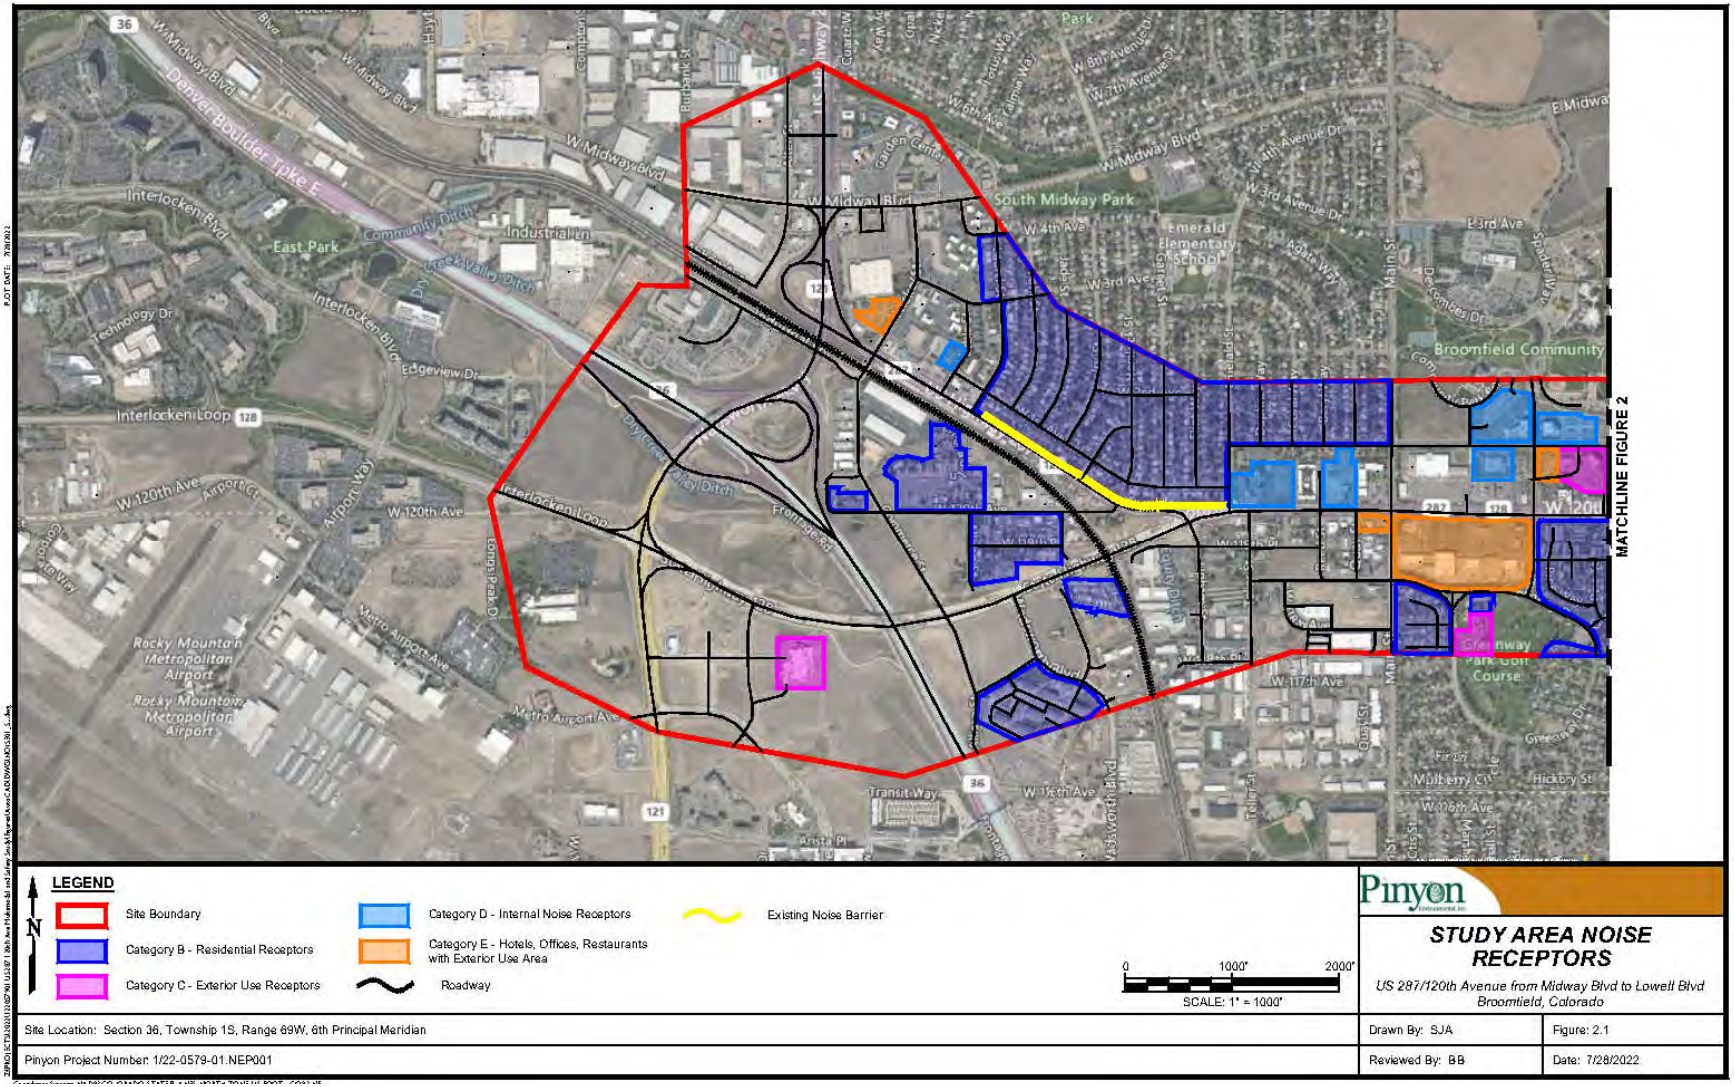

Figure 2.1: Study Area Noise Receptors – Western Section

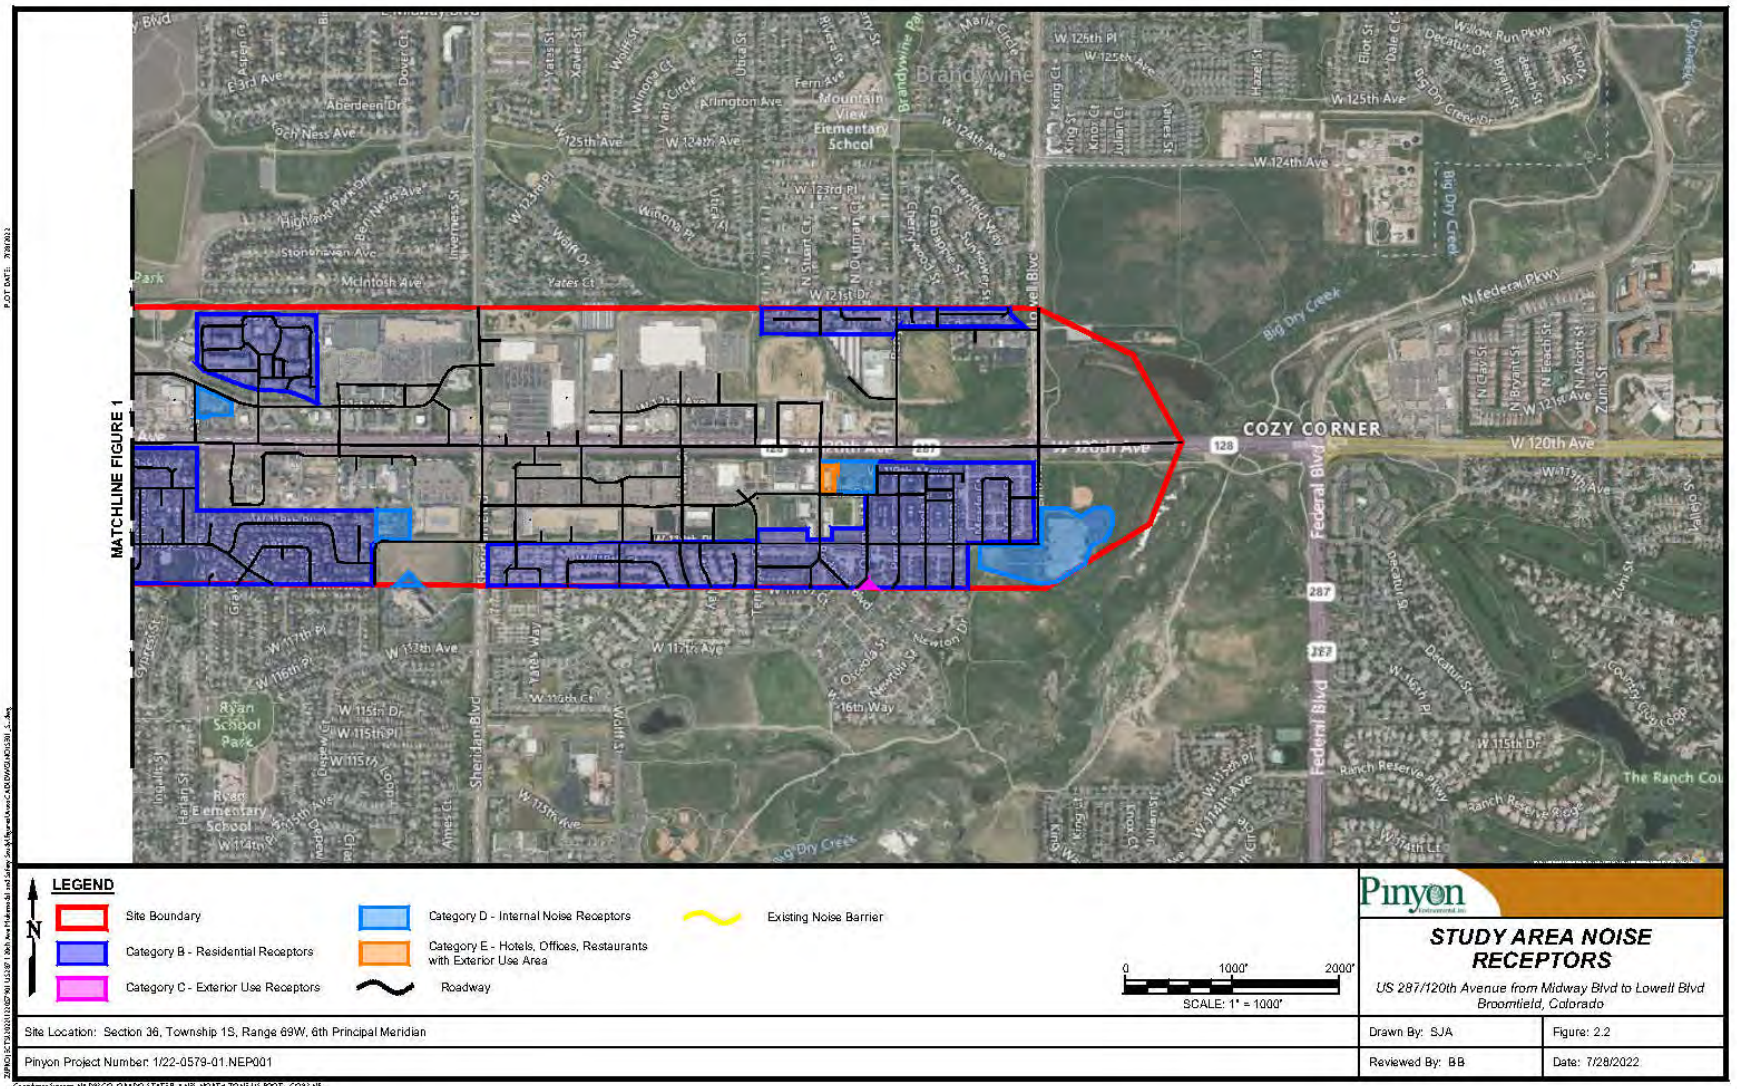

Figure 2.2: Study Area Noise Receptors – Eastern Section

5.4 Next Steps and Alternative Recommendations

5.4.1 Project Classification

According to the NAAG, the following criteria constitute a Type I project:

- Construction of a highway on a new location.
- The physical alteration of an existing highway where there is either substantial horizontal or vertical alteration.
    - Substantial horizontal alteration: A project halves the distance between the traffic noise source and the closest receptor between the existing condition to the future build condition
    - Substantial vertical alteration: A project that removes shielding, therefore exposing the line-of-sight between the receptor and the traffic noise source. This is done by either altering the vertical alignment of the highway or by altering the topography between the highway traffic noise source and the receptor
- The addition of a through-traffic lane(s). This includes the addition of a through-traffic lane that functions as a high-occupancy vehicle (HOV) lane, high-occupancy toll (HOT) lane, bus lane, or truck climbing lane.
- The addition of an auxiliary lane, except when the auxiliary lane is a turn lane.
- The addition or relocation of interchange lanes or ramps added to a quadrant to complete an existing partial interchange.
- Restriping existing pavement for the purpose of adding a through-traffic lane or auxiliary lane.
- The addition of a new or substantial alteration of a weigh station, rest stop, ride-share lot, or toll plaza.

If the project does not meet the criteria for a Type I project, it is categorized under the NAAG as a Type III project, and generally no noise modeling is required. A list of example Type III projects is included in the NAAG.

5.4.2 Considerations

Any project that meets criteria for a Type I classification under the NAAG will need to undergo noise analysis and potential noise abatement. General noise analysis and abatement steps, as outlined by the NAAG, are as follows:

1. Conduct noise scoping meeting
2. Define noise study zone*
3. Identify eligible receptors (may need CDOT coordination)
4. Determine if further analysis is needed
5. Gather noise measurements
6. Create initial existing condition noise model

7. Validate existing condition noise model (may need CDOT coordination)
8. Gather model data inputs
9. Create existing conditions noise model that includes receivers for sensitive noise receptors
10. Generate design-year noise model(s)
11. Perform noise impact analysis (needs CDOT review/approval)
12. Perform noise abatement analysis
    a. Evaluate feasibility of abatement
    b. Evaluate reasonableness of abatement (decibel [dB] reduction and cost)
13. Develop statement of likelihood
14. Determine applicability of construction noise
15. Submit information to local officials (if Category G areas are present)
16. Develop traffic noise technical report (needs CDOT review/approval)
17. Summarize noise analysis in NEPA document
18. Noise verification (during final design)
19. Design noise abatement (during final design)
20. Conduct benefited receptor preference survey (during final design)

**NOTE: under the NAAG, Noise Study Zones are typically set at 500 feet for freeways and expressways and 300 feet for all other types of roads. These zones represent the minimal area that is evaluated. If modeling shows impacts at or near the Noise Study Zone boundary, the Noise Study Zone is generally expanded to include nearby receptors.*

Noise receptor data for this Environmental Constraints Analysis was gathered up to 0.25 mile from the study roadways and should be sufficient to account for potential Noise Study Zones; however, design alternatives that incorporate cross-connecting roadways that were not initially included in this constraints analysis may expand noise impacts outside of the study area, necessitating further data gathering on potential noise-sensitive receptors.

When considering design alternatives that may meet Type I project criteria, the design team should bear in mind that the above noise analysis and abatement process could take six (6) or more months to complete, including field surveys for data gathering. Furthermore, the various steps that require review and approval from a CDOT noise specialist will certainly add review durations that could be up to two (2) weeks for each step. Design schedules should be made to accommodate these durations, should the project be classified as a Type I.

6. Hazardous Materials

6.1 Introduction

6.1.1 Regulatory Context

There are multiple federal, state, and local environmental regulations that provide for the use, transport, and disposal of hazardous materials as well as for clean-up of soil and groundwater that have been impacted by improper use, storage, and disposal. The following sections detail common regulations that pertain to hazardous materials.

6.1.1.1 Federal Regulations

- **Comprehensive Environmental Response, Compensation, and Liability Act** (42 United States Code [USC] Part 103, Section 9601 et seq.). The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) was enacted in 1980 (42 USC §9601 et seq.) and subsequently amended by the Superfund Amendments and Reauthorization Act (42 USC §9601 et seq.). CERCLA (also known as "Superfund") is designed to clean up closed and abandoned sites contaminated with hazardous substances. The law authorizes the U.S. Environmental Protection Agency (EPA) to identify parties responsible for contamination of sites and compel the parties to clean up the sites. Sites potentially impacted by hazardous substances are reported to EPA and additional investigation is conducted. Based on the results of the investigation, EPA either determines that no further action is necessary at the federal level (but may refer the site to the state for additional activities) or places the site on the National Priorities List. Sites remain on the list until clean-up activities have been completed and the site is delisted.
- **EPA Standards and Practices for All Appropriate Inquiries/ American Society for Testing and Material International (ASTM)** (40 Code of Federal Regulations [CFR] Part 312). EPA has established federal standards and practices for conducting all appropriate inquiries related to the previous ownership and uses of a property to qualify for landowner liability protections under CERCLA.
- **National Emission Standards for Hazardous Air Pollutants (NESHAP)** (40 CFR Part 61, Subpart M). The EPA air toxics regulation for asbestos is intended to minimize the release of asbestos fibers during activities involving asbestos handling. The air toxics provision of the Clean Air Act requires EPA to develop and enforce regulations to protect the public from exposure to airborne contaminants. In accordance with Section 112 of the Clean Air Act, EPA establishes NESHAPs. The Asbestos NESHAP regulation provides a method for identifying asbestos-containing materials and defines a process to categorize, abate, transport, and dispose of these materials.
- **Occupational Safety and Health Administration (OSHA) Asbestos Standards** (General Industry 29 CFR 1910, Subpart Z; Construction 29 CFR 1926). OSHA has standards to protect workers from the hazards of asbestos depending on the type of workplace. The General Industry Standard covers exposures occurring from activities such as brake and clutch repair, maintenance work, and manufacture of asbestos-containing products. The Construction Standard covers construction, alteration, repair, maintenance, renovation, and demolition of structures containing asbestos.
- **OSHA Lead Standard for the Construction Industry** (29 CFR 1929.62). OSHA has standards to protect workers from the hazards of lead in a variety of forms, including metallic lead, all inorganic lead compounds, and organic lead soaps. The standard establishes maximum limits of exposure to lead for all workers covered, including permissible exposure limits and action levels. This standard applies

to construction where a worker may be exposed to lead due to alteration, repair, demolition, salvage, or other disturbance of materials covered with lead-containing paint.

- **Resource Conservation and Recovery Act (RCRA)** (40 CFR Parts 260-299). RCRA (42 USC §321 et seq.), enacted in 1976, establishes a framework for the management of both solid waste and hazardous waste. RCRA Subtitle C authorizes EPA to develop regulations for cradle-to-grave management of these wastes. In Colorado, the CDPHE has promulgated regulations for management of both solid waste (6 Code of Colorado Regulations [CCR] 1007-2) and hazardous waste (6 CCR 1007-3).
- **Toxicity Substances Control Act** (40 CFR Parts 700-760, 762, 765-766). The Toxicity Substances Control Act provides guidance to EPA and authorized states with administering compliance of this act, particularly related to polychlorinated biphenyls (PCBs). PCBs were banned from manufacture in the U.S. in 1979, although some products and equipment may still contain these substances. Of particular concern are electric transformers, including those that are pole- or pad-mounted.

6.1.1.2 State and Local Regulations

- **Underground Storage Tank (UST) Remediation**, Colorado Department of Labor and Employment—Division of Oil and Public Safety (OPS) (7 CCR 1101-14). Under the auspices of the Colorado Department of Labor and Employment OPS, this remediation complies with laws and regulations surrounding damage to the environment and risk to the public from leaking storage tanks, identifies responsibilities of the owner/operators of storage tanks, and provides technical guidance for response to releases from storage tanks.
- **Radiation Control**, CDPHE, Hazardous Materials and Waste Management Division (6 CCR 1007-1), provides guidance on radiation management.
- **CDPHE Solid Waste Regulations** (6 CCR 1007-2 Part 1, Section 5) and **Air Quality Control Commission Regulation 8** (Part B). The CDPHE Solid and Hazardous Waste Commission Regulation Pertaining to Solid Waste Disposal Site and Facilities governs the disposal of asbestos waste and management of asbestos-contaminated soil in Colorado. The Air Quality Control Commission governs asbestos abatement in Colorado.

The U.S. Department of Transportation and the Colorado Department of Public Safety, State Patrol Hazardous Materials Section, are responsible for regulating hazardous materials transportation. The Colorado State Patrol is responsible for reporting spills to the CDPHE associated with highway transportation incidents.

6.2 Methodology

6.2.1 Data Gathering

A review of the compliance history and regulatory database search of facilities as received from Environmental Risk Information Service (ERIS) within or adjacent to the study area, including potential hazardous material facilities up to one mile from the study area, was completed (see ***Attachment B***). It is not possible to verify the accuracy or completeness of information contained in these databases; however, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence.

6.2.2 Analysis Approach

The primary concern focuses on potential impacts to soil and groundwater in the study area. This analysis did not include a detailed review of each facility identified in the agency database, such as whether a release was reported or confirmed, regulatory compliance, remediation, or regulatory closure. For this analysis, the number and types of regulated facilities were identified within the prescribed search distances (***Attachment B***) and used to evaluate the potential environmental risks posed by regulated facilities within the study area. Risk was defined as low, moderate, or high based on the type of facility, the hydrogeologic relationship of the facility to the study area, and distance to the study area. Risk was defined as follows:

- **A low-risk facility** was determined to be unlikely to result in contamination during construction due to variables such as distance of a facility from the study area, minimal work anticipated near the facility, or hydrogeological position of the facility (for example, a release from the facility would travel away from the study area).
- **A moderate-risk facility** was determined to be unclear if contamination would be present, but the potential could not be discounted.
- **A high-risk facility** was determined to be a location where known contamination would likely be encountered during construction.

The information on hazardous materials sites in the study area can help inform design modifications or additional analysis that may be warranted as alternatives are evaluated and screened.

6.3 Findings

6.3.1 ERIS Database Definitions

AUL – Activity Use Limitations

CDPHE – Colorado Department of Public Health & Environment

CERCLIS – Comprehensive Environmental Response, Compensation and Liability Information System

GW – Groundwater

HAZ CORRACT – Hazardous Waste Sites Corrective Action

LST – Leaking Storage Tanks

NFRAP – No Further Remedial Action Planned

RBCA – Risk-based Closure Assessment

RCRA – Resource Conservation and Recovery Act

CORRACTS – RCRA Corrective Action facility

TSD – RCRA Treatment, Storage, and/or Disposal facility

SEMSARCH – EPA Superfund Enterprise Management System Archive site

VCP – Voluntary Cleanup and Redevelopment Program

6.3.2 ERIS Database Findings

The table below lists the facilities that were identified by ERIS within one mile of the study area and includes the risk potential along with the reasoning behind the facility's inclusion and respective risk. These facilities are also labeled by ERIS ID in ***Figures 3.1 and 3.2***.

ERIS ID	Facility Name	Facility Address	Potential	Reasoning
1	Century Chevrolet	6105 W 120th Ave	Medium	LST with Pre-Risk-based Closure Assessment (RBCA) closure
21	Lionheart Cleaners	6785 W 120th Ave	Medium	Dry cleaners, no reported releases, no CDPHE records
25	Aqua Bright Cleaners	6650 W 120th Ave	Medium	Dry cleaners, no reported releases, no CDPHE records
28	Excalibur Cleaners	6811 W 120th Ave	Medium	Dry cleaners, no reported releases, no CDPHE records
29	R&J Conoco	6800 W 120th Ave	Medium	Gas station/leaking storage tank (LST), Tier II closure
35	CST Metro LLC dba Corner Store #653	6910 W 120th Ave	High	Gas station/LST, two Tier II closure, one active release - implementing Corrective Action Plan (CAP)
51	Broomfield Central Office	5205 W 120th Ave	Medium	LST with Pre-RBCA closure
60, 61	Broomfield Plaza Cleaners	5157 W 120th Ave	High	Dry cleaners, reported release, Activity Use Limitations (AULs) - no groundwater (GW) use
83	Martinizing Dry Cleaning	5160 W 120th Ave	Medium	Dry cleaners, no reported releases, no CDPHE records
85	Kmart #7099	5005 W 120th Ave	Medium	LST with Pre-RBCA closure
89	Chemical Handling Corporation	11811 Upham St	High	SEMSARCH site, lien(s) identified, details: crude oil, petroleum, natural gas extraction, RCRA CORRACTS/TSD
93	Barber's Poultry Inc.	4851 W 120th Ave	Medium	LST with Pre-RBCA closure
104	Alexander Concrete Construction	7715 W 119th Pl	Medium	LST with unknown status closure
110	CSP - Broomfield #49121	7701 W 120th Ave	Medium	LST with Tier II closure
113	Les Williams Electric	7705 120th Ave	Medium	LST with Pre-RBCA closure
122	Bradburn Property	Main Street and Tennyson Street	Medium	Brownfield
129	Durango Market LLC	1495 Hwy 287	High	Gas station/LST with Tier IV closure
130	Hensley Oil	4301 W 120th Ave	Medium	VCP - NAD but impacted GW plume still present (no GW use in area)

ERIS ID	Facility Name	Facility Address	Potential	Reasoning
132	Broomfield Duplex Indoor Air	12125 Emerald Lane	Medium	CERCLIS/SEMS site, no details
133-135	Cowboy Cleaners/Exquisite Cleaners	1305 W 4th Ave	Medium	VCP - NAD but impacted GW plume still present (no GW use in area)
136	Hearts Jiffy Stop Inc.	1300 Midway Blvd	Medium	LST with Pre-RBCA closure
143	Broomfield Hardware	290 Nickel St	Medium	LST with Pre-RBCA closure
146	Apple Mary's Laundry	300 Nickel St	Medium	Dry cleaners, no reported releases, no CDPHE records
147	Sill-Terhar Ford	1480 W 1st Ave	High	LST Tier III closure
148	Broomfield Auto Service Center	1st St & Nickel St	Medium	LST with Pre-RBCA closure
154	Broomfield Fueling Station	1600 Hwy 287	High	LST with Tier III closure
156	Conoco #06370	1601 Hwy 287	High	LST with Tier III closure
157, 158	Broomfield Auto Body Inc.	187 Commerce St	Medium	Remedial activities under EPA enforcement
164	City of Broomfield Maintenance Facility	225 Commerce St	Medium	LST with Pre-RBCA closure
166	Dick Howe	155 Commerce St	Medium	LST with Pre-RBCA closure
173	Coscan Inc	2100 Industrial Ln	Medium	LST with Pre-RBCA closure
174	Rocky Mountain Chemical Laboratory	80 Garden Office Center	Medium	SEMSARCH/NFRAP site
175	Midway 66	1760 W Midway Blvd	High	Active LST implementing CAP
176	Huskey Service Station	1765 Midway Blvd	Medium	LST with Pre-RBCA closure
180	Circle K Store #2709873	425 N Hwy 287	Medium	LST with Tier II closure, administrative closure, pre-RBCA closure
181	Turnpike Construction	570 Hwy 287	Medium	LST with administrative closure
182	A-B Petroleum #31	525 Hwy 287	Medium	LST with Pre-RBCA closure
196	Various auto repair shops	555 Alter St	Medium	No reported releases but several in one location presents combined risk
216	VSR Corp	11780 Wadsworth Blvd	Medium	LST with Pre-RBCA closure
228	Commander Leasing Property	2300 W Midway Blvd	Medium	LST with Tier II closure
229	Spill Case No. CO93-239	11730 Wadsworth Blvd	Medium	AST release, no identified cleanup info

ERIS ID	Facility Name	Facility Address	Potential	Reasoning
231	Sun Chem Corp - GPI Div	2310 W Midway Blvd	Medium	CERCLIS NFRAP/SEMSARCH - no cleanup details
11	7245 W 118th Pl	7245 W 118th Pl	Medium	Remedial activities under EPA enforcement
42	2400 Industrial Ln	2400 Industrial Ln	High	Chlorinated solvent plume; RCRA Corrective action site
50	11600 Hwy 121	11600 Hwy 121	Medium	LST with Tier II closure
54	11605 Wadsworth Blvd	11605 Wadsworth Blvd	Medium	LST with Pre-RBCA closure
57	7620 W 116th Ave	7620 W 116th Ave	Medium	SEMSARCH/CERCLIS NFRAP - no EPA profile
84	9616 Metro Airport Ave	9616 Metro Airport Ave	Medium	LST with Pre-RBCA closure
98	11515 Wadsworth Blvd	11515 Wadsworth Blvd	Medium	LST with Tier II closure
128	11915 Airport Way	11915 Airport Way	Medium	LST with Tier II closure
130, 135, 136	800-802 Hoyt St	800-802 Hoyt St	High	Covenant-protected property - impacted GW/soil vapor; HAZ CORRACT site
132	645 Compton St	645 Compton St	Medium	LST with Pre-RBCA closure
133	660 Compton St	660 Compton St	Medium	Active LST – no closure date
137	10401 W 120th Ave	10401 W 120th Ave	High	RCRA CORRACTS site - heavy manufacturing/aviation

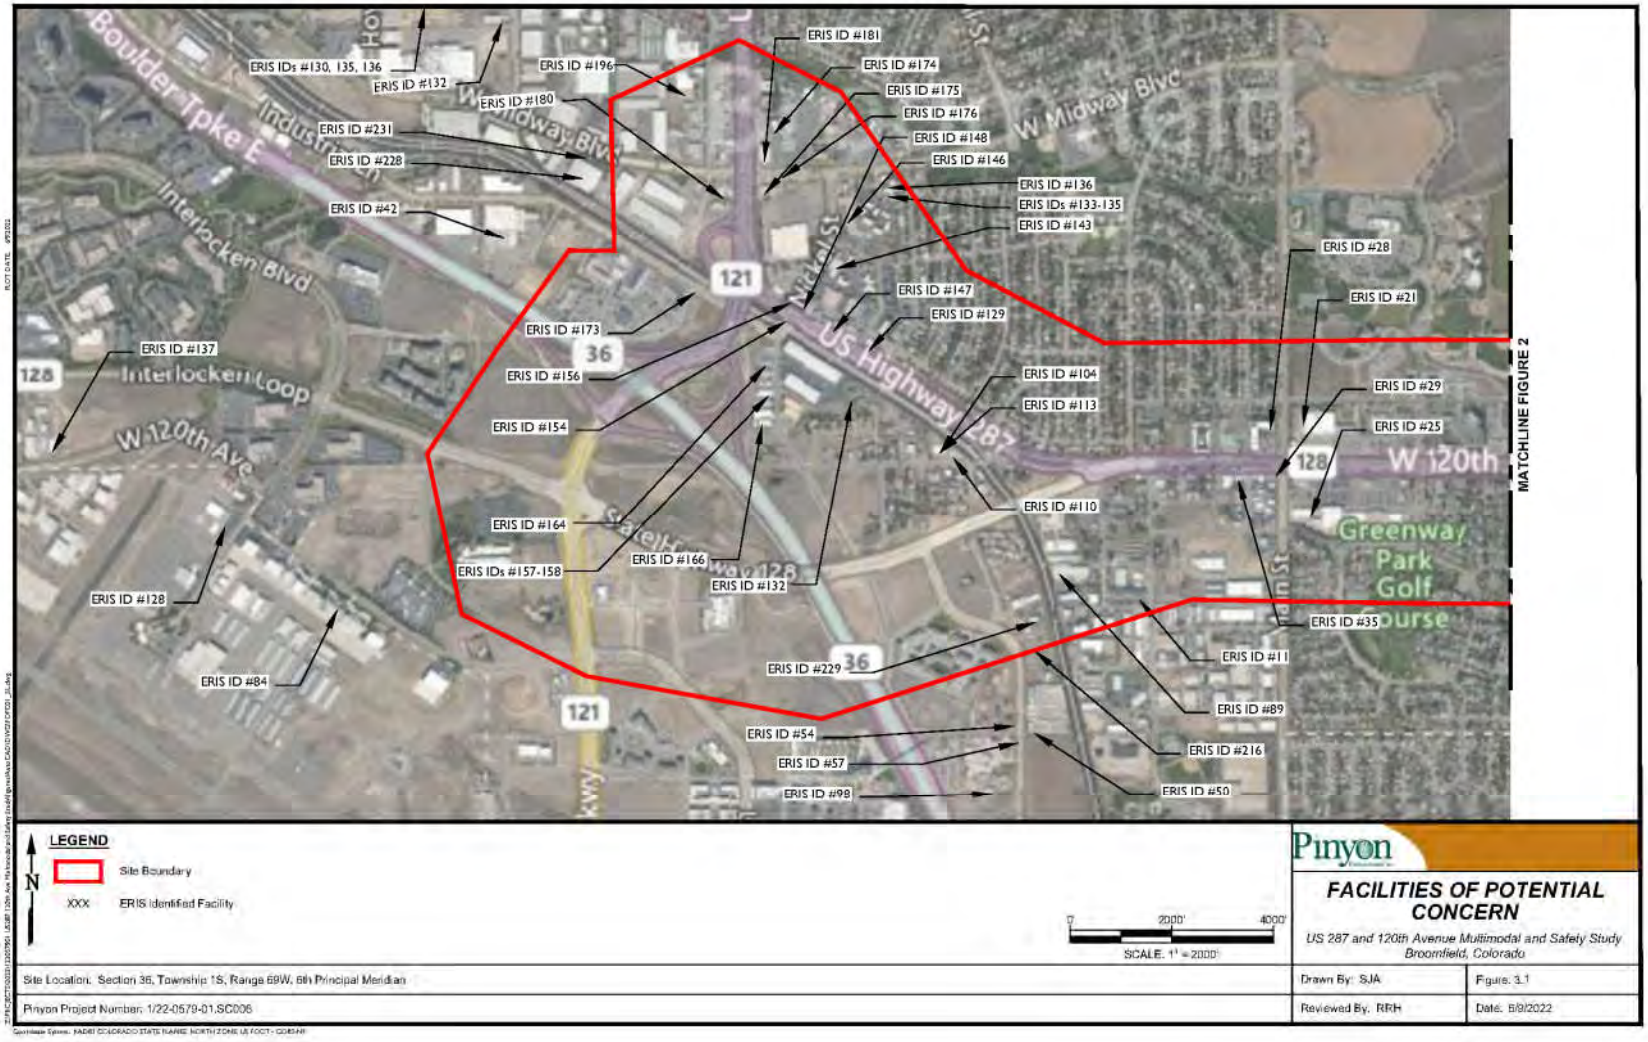

Figure 3.1: Facilities of Potential Concern – Western Section

Figure 3.2: Facilities of Potential Concern – Eastern Section

6.4 Recommendations and Considerations

6.4.1 Design-phase Recommendations

If future improvements will impact facilities of potential concern, detailed evaluation of specific facilities is recommended, including reviewing facility files and evaluating potential construction and/or property ownership concerns.

The potential for the hazardous materials identified in this environmental scan to impact future project activities is dependent on construction types, magnitude, and construction depth. For instance, resurfacing activities near a gas station where depth of disturbance during construction would be less than a few feet are unlikely to result in exposure to regulated materials. However, deep construction such as installation of caissons near a gas station could result in exposure to regulated materials.

6.4.2 NEPA Considerations

If FHWA/CDOT oversight is required for the project, CDOT Form 881/Initial Site Assessment (ISA) or Modified Environmental Site Assessment (MESA) and potentially a Phase 1 Environmental Site Assessment will be required. A current agency database along with review of specific project actions would be required. If facilities of concern are identified adjacent to the projects, and depths of construction may impact these facilities, additional investigation, including soil and/or groundwater sampling, may be prudent. Results of additional investigation can then inform mitigation measures. Regardless of CDOT involvement, it is prudent to complete a Phase 1 ESA if any right-of-way will be acquired.

7. Cultural Resources

Cultural existing Conditions are analyzed separately in ***Attachments D and E***. Please refer to those documents for findings and general recommendations regarding cultural resources in the study area.

8. Biological Resources

Biological resources are analyzed separately in ***Attachment C***. Please refer to that document for findings and general recommendations regarding biological resources in the study area.

9. Section 4(f)/6(f) Resources

9.1 Introduction

Section 4(f) refers to the original section within the U.S. Department of Transportation Act of 1966 which provided for consideration of public park and recreation lands, wildlife and waterfowl refuges, and public or private historic sites during transportation project development. The law, now codified in 49 U.S.C. §303 and 23 U.S.C. §138, applies only to the U.S. Department of Transportation (U.S. DOT) and is implemented by the FHWA and the Federal Transit Administration through the regulation 23 Code of Federal Regulations (CFR) 774.

Section 6(f) refers to a section of the Land and Water Conservation Fund (LWCF) Act of 1965 (Public Law 88-578, 78 Stat 897). The law prohibits the conversion of property acquired or developed with grants from the LWCF to a non-recreational purpose without the approval of the National Park Service (NPS). Section 6(f) typically applies to all transportation projects, regardless of the source of funding, and is approached as an entirely separate evaluation process from Section 4(f).

9.2 Methodology

To gather information on potential Section 4(f) resources within the project study area, the project team reviewed the Colorado Trail Explorer (COTREX, 2022), along with park and trail maps from both the City of Westminster and the City and County of Broomfield, to identify and map current recreational trails, parks, and open spaces as well as proposed trails identified in the City and County of Broomfield's future trail plans (***Figures 4.1 and 4.2***). Additionally, open space representatives from both the City of Westminster and the City and County of Broomfield along with the CDOT Region 1 Section 4(f) specialist were contacted to confirm the status of these features as Section 4(f) resources.

Information on Section 6(f) resources was gathered using CDOT's Online Transportation Information System (OTIS), which is an ArcGIS Online mapping tool that contains up-to-date layers for LWCF parcels.

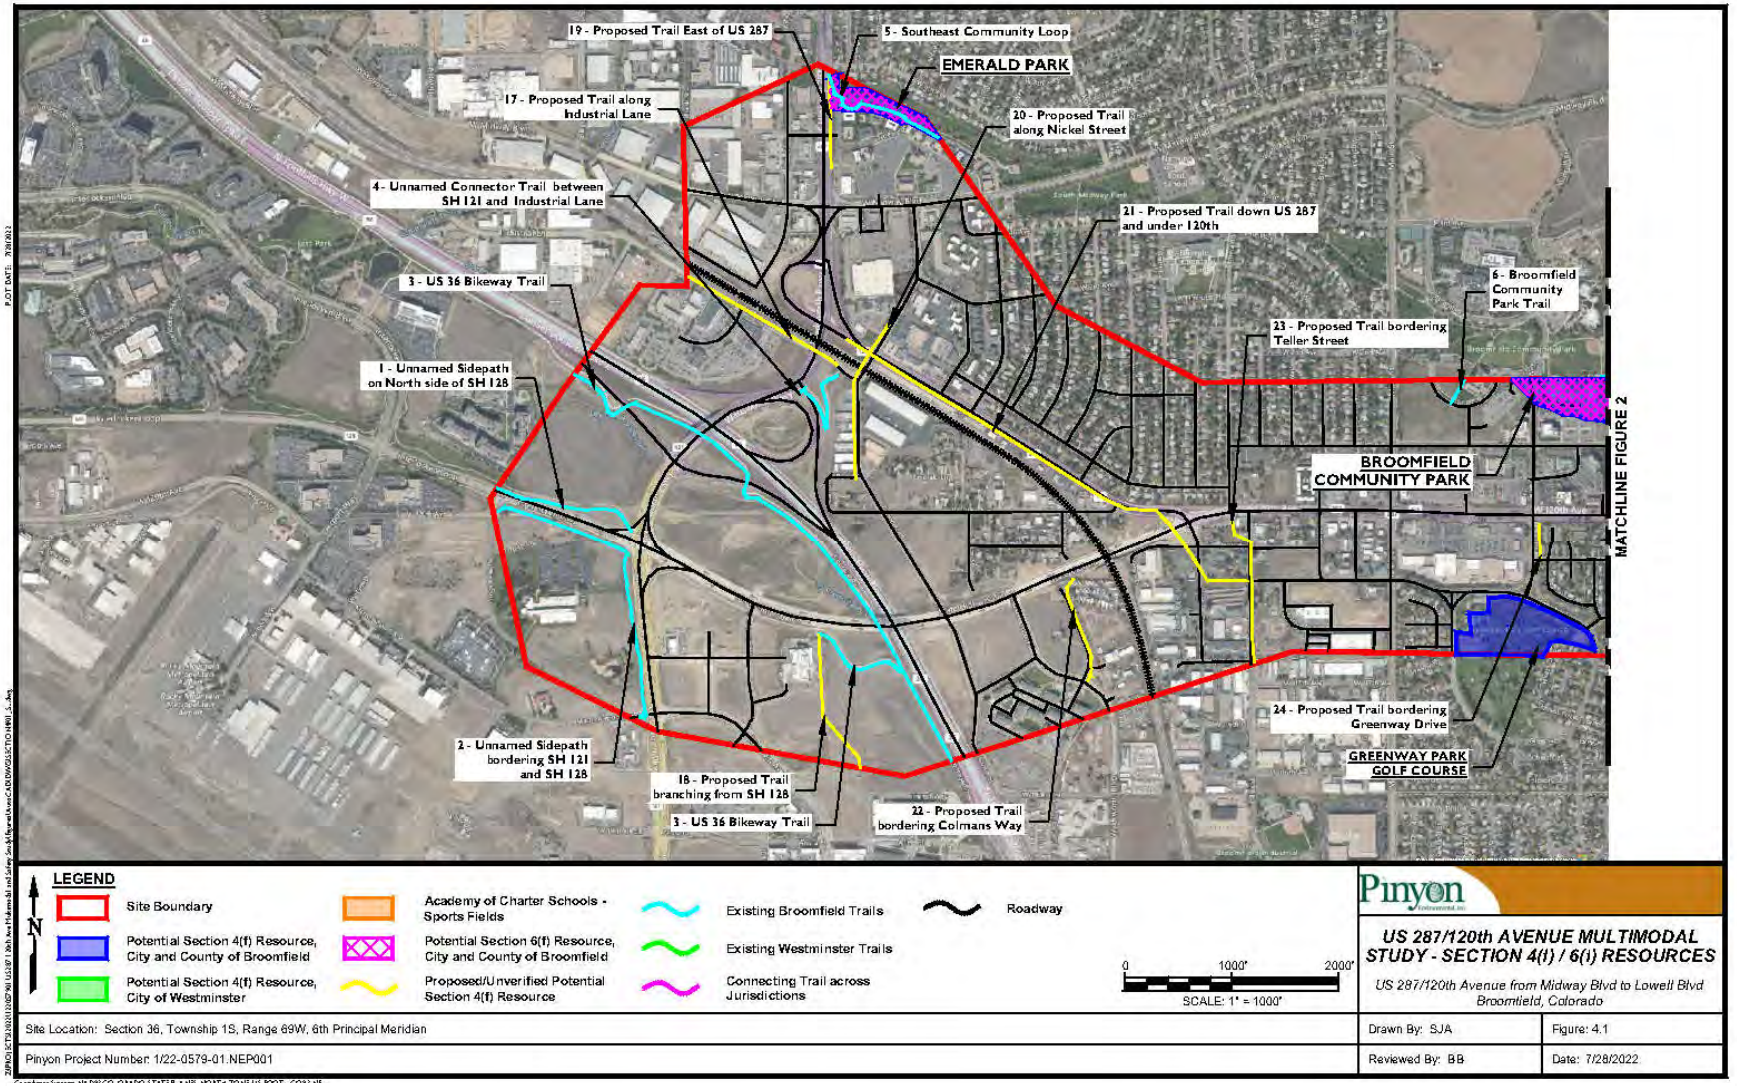

Figure 4.1: Section 4(f)/6(f) Resources – Western Section

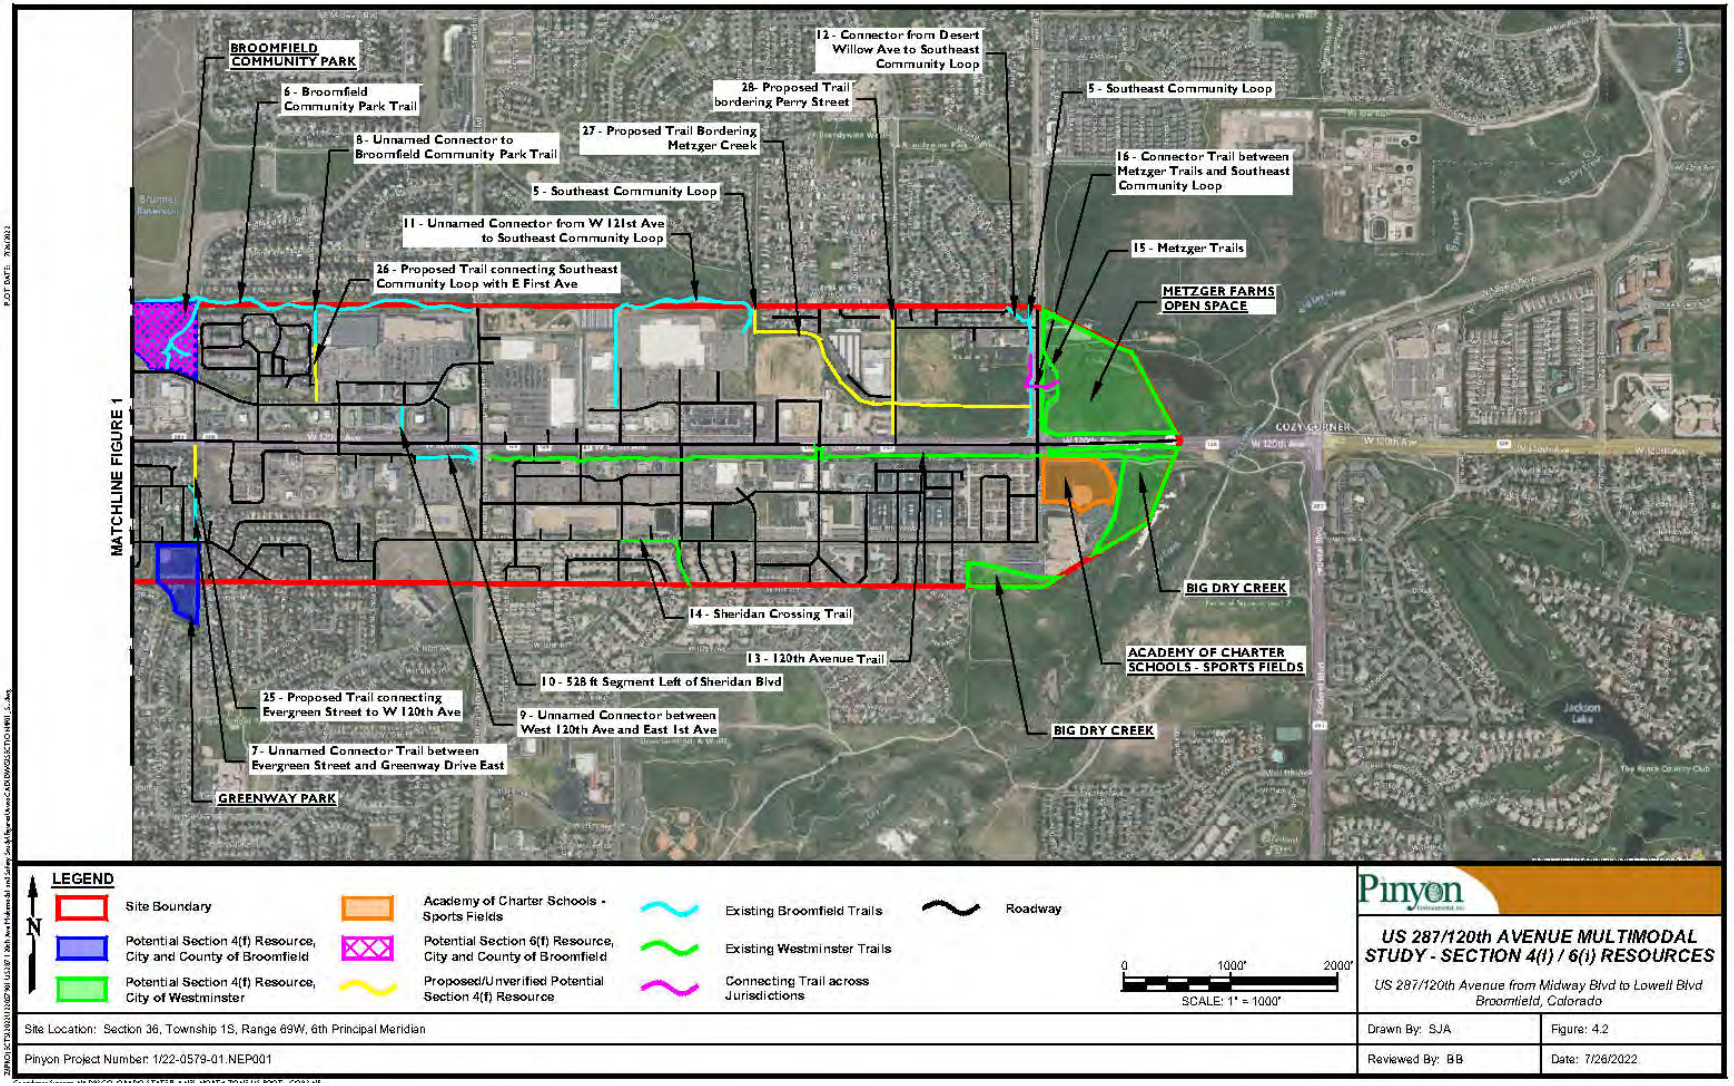

Figure 4.2: Section 4(f)/6(f) Resources – Eastern Section

9.3 Findings and Considerations

9.3.1 Section 4(f) Resource Findings

Most Section 4(f) and 6(f) resources are reasonably distanced from the study roadways (greater than 100 feet away) to where any proposed roadway improvements would not risk impacting them; however, a few Section 4(f) resources are close enough to the project roadway (within 100 feet) to where potential improvements may impact them and trigger additional analysis:

- ***1*** *– Unnamed Sidepath on North side of SH 128 &* ***2*** *– Unnamed Sidepath bordering SH 121 and 128* (City and County of Broomfield)

  Both of these sidepaths are on the far side of the SH 128 and SH 121 intersection from where roadway improvements are being considered. Design alternatives leading up to the intersection will stand little chance of impacting these resources; however, if the SH 128/121 intersection itself is altered in any way, there is a risk of impacts to both of these resources.

- ***3*** *– US 36 Bikeway Trail* (City and County of Broomfield)

  This Section 4(f) resource runs underneath the SH 128 overpass at US 36. Impacts to this resource would probably be temporary, if any.

- ***10*** *– 528 Ft Trail Segment Left of Sheridan Blvd* (City and County of Broomfield)

  This Section 4(f) resource continues the 120th Avenue trail across Sheridan Boulevard and into the City and County of Broomfield. This resource has the same risks as ***1*** *– 120th Avenue Trail*, above. The distance to the roadway is ~80 feet; however, COTREX shows that the trail extends up closer to 120th Avenue in order to meet with the crosswalk at Sheridan Boulevard.

- ***13*** *– 120th Avenue Trail* (City of Westminster)

  This trail runs along the south side of 120th Avenue between Sheridan Boulevard and Lowell Boulevard. The majority of the trail is approximately 80 feet from the roadway itself; however, the trail's crossing at Bradburn Boulevard runs directly adjacent to the roadway before again expanding out to 80 feet afterwards. Impacts to this resource, especially the crossing at Bradburn Boulevard, may be challenging to avoid.

- ***Big Dry Creek*** (City of Westminster)

  The entirety of Big Dry Creek is considered a Section 4(f) resource. According to COTREX, the limits of this resource extend all the way to the southeast corner of Lowell Boulevard and 120th Avenue. Much like the unnamed sidepaths at SH 128 and 121, this boundary is on the far side of the intersection from where roadway improvements are being considered. Design alternatives leading up to the intersection are unlikely to impact these resources; however, if the intersection itself is altered in any way that expand areas of disturbance to the southeast, there is a risk that the Big Dry Creek resource could be impacted.

- ***Metzger Farms Open Space*** *&* ***15*** *– Metzger Trails* (City of Westminster)

Much the same as Big Dry Creek, the entirety of the Metzger Farms Open Space is considered a Section 4(f) resource, and its boundary extends all the way to the intersection with Lowell Boulevard and 120th Avenue. Metzger Trails borders the western side of the open space – on the east side of Lowell Boulevard – and ties directly into the Lowell Boulevard/120th Avenue intersection. These resources are unlikely to be impacted by design alternatives leading up to the eastern intersection; however, direct intersection improvements that impact pedestrian access or expand areas of disturbance further to the northeast could potentially impact the trails and the open space.

Additionally, there are a number of proposed/future-planned trails around the study area, as shown by the yellow lines in ***Figures 4.1 and 4.2*** (Broomfield, 2021). At the time of alternative development, the project should be reassessed to determine if any of these proposed/future-planned trails have since been constructed, as they would then need to be evaluated as potential Section 4(f) resources. It is also advised that the design team coordinate with the Officials with Jurisdiction for the proposed trails (City and County of Broomfield or City of Westminster, most likely) to avoid and/or minimize impacts prior to construction.

9.3.2 Section 4(f) NEPA Considerations

According to the CDOT NEPA Manual, a Section 4(f) evaluation is required when a project uses a Section 4(f) resource. A use is defined as one of the following:

- Permanent incorporation/permanent easement – Land from a Section 4(f) property is permanently incorporated into the transportation system through fee simple acquisition or permanent easement
- Temporary use of land for construction purposes is adverse in terms of the statutes preservation purpose
- Constructive Use – Proximity impacts of the transportation project are so great that the purposes for which the Section 4(f) property exists are substantially impaired (normally referred to by courts as a constructive use)

The Section 4(f) evaluation should be initiated when alternatives for the proposed action are first being designed and developed. If the Section 4(f) evaluation is part of the NEPA document, it should be completed in conjunction with the NEPA process to the extent possible.

Compliance with Section 4(f) can be established in the following ways:

1. Application of an exception to Section 4(f) identified in 23 CFR 774.13;
2. A *de minimis* impact determination;
3. A Nationwide Section 4(f) Programmatic Evaluation approved at the FHWA Division Office level;
4. A full Section 4(f) evaluation requiring FHWA legal and external agency review prior to approval

NOTE: Each Section 4(f) impact applicable to the project alternative must meet compliance separately.

9.3.2.1 Exceptions to Section 4(f)

Exceptions to Section 4(f), as established by 23 CFR 774.13, allow the use of Section 4(f) properties without requiring a formal evaluation. Each exception has specific criteria that must be met in order to demonstrate applicability.

9.3.2.2 De minimis Impacts to Section 4(f)

Certain impacts to Section 4(f) properties may be considered minor (*de minimis*) in nature. Determination of *de minimis* impacts must also be demonstrated to and approved by the FHWA Colorado Division. Requirements for *de minimis* are included in 23 CFR 774.5(b), 774.7(b), and 774.17.

9.3.2.3 Programmatic Evaluations of Section 4(f)

FHWA developed five nationwide programmatic evaluations for Section 4(f) properties that include specific criteria to meet. Programmatic evaluations require coordination and documentation that include proof that there are no prudent and feasible alternatives to using the Section 4(f) resource and that all measures to minimize harm have been taken into account. Programmatic evaluations do not require legal review, only review and approval from the FHWA Colorado Division.

9.3.2.4 Individual Section 4(f) Evaluation

Individual evaluations require full and sufficient analysis and supporting documentation to demonstrate that there is no feasible and prudent avoidance alternative and that the preferred alternative causes the least overall harm. This analysis shall summarize the results of all possible planning to minimize harm. Evaluations typically adhere to draft and final stages and are subject to FHWA legal sufficiency review prior to approval.

9.3.3 Section 6(f) Resource Findings

Within the project study area, Midway Park and the Broomfield Community Park were identified as Section 6(f) resources. These Section 6(f) properties are located either on the northernmost edge of the study area or out of it entirely. Even though these properties exist entirely or mostly outside of the 0.25-mile study area buffer, they have been included in ***Figures 4.1 and 4.2*** for documentation purposes.

Due to their distance from the roadway alternatives considered in this study, these properties are not anticipated to be impacted by the potential design alternatives.

9.3.4 Section 6(f) NEPA Considerations

Since design alternatives developed as a result of this study are not anticipated to impact Section 6(f) resources, this section may be disregarded; however, if design alternatives limits change to the point where they may impact Section 6(f) resources, refer to the following for NEPA Considerations:

Section 6(f) Evaluation generally follows the same initiation process as that of the Section 4(f) Evaluation; however, once Section 6(f) impacts are identified and determined to be unavoidable, the project should coordinate with Colorado Parks & Wildlife (CPW) to clarify property boundaries, propose mitigation that equitably counteracts impacts to the property, and achieve concurrence from CPW on the evaluation. Conversions of Section 6(f) property to anything other than a recreational use require coordination with NPS an identification of replacement land of at least fair market value and equivalent usefulness. For more information, refer to the CDOT NEPA Manual, Chapter 9 – Resource Considerations.

10. Conclusions

Findings and recommendations made in this Environmental Constraints Analysis for each resource area aim to inform the development of design alternatives and to forecast the potential analyses that alternatives could need in accordance with the NEPA process; however, please note that this document itself does not satisfy any analysis that may be required as part of the NEPA process. Refer to the *Considerations* sections of each

individual environmental resource for information on potential NEPA analyses and evaluations that could be required.

It should also be noted that this Environmental Constraints Analysis does not cover the topic of environmental justice. As of the time this analysis was conducted, CDOT has expanded environmental justice requirements to cover Categorical Exclusion (CatEx) environmental documents, whereas their previous necessity was largely limited to Environmental Assessments (EAs) and Environmental Impact Statements (EISs). If projects resulting from the design alternative recommendations of this study were to consider using federal funds, environmental justice would need to be analyzed much the same as the included resource areas in this document.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Notified Name: WQCD: Nicole Owens, Nicole Rollo, Gary Halbersleben, Ram Ramaswami, Kelsey Baertschi, Bret Icenogle, HMWMD: Walter Avramenko, Charles Johnson, Darrell Dearborn, EPA,. NRC
Additional Comments:
Comments:
Cause Info: car ran into the transformer, releasing up to 150 gallons of non-pcb transformer oil to asphalt. A small amount appears to have gone into a storm drain about 200 ft. to the east of the transformer, since there is a slight sheen on the water in the storm drain.
Action: Fire Dept. put down absorbent material, and Xcel put down absorbent pads to contain the oil. They did power washing and have collected the washings.

Comments: BROOMFIELD COUNTY EH
Cause Info: 20 5-gallon plastic pails (or buckets) of 1) Spa Ready Lemon & Lme Sugar Scrub Glow and 2) Foot Spa Mint and Eucalyptus Fine Rock Salt fell off the truck bed and onto the asphalt parking lot and broke. Someone at the site

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

reportedly washed 5-10 gallons into a storm drain that was clogged with debris. Reportedly the debris was enough to soak up the spilled material, so that it is thought not to have gone through the drain. The material was being delivered to AAA Nail Supply at the address of the spill.

Action: Custom Environmental Services was doing clean up.

Response Comments: ALL RELEASED MATERIAL WAS CONTAINED WITHIN THE BASEMENT OF THE PRIVATE RESIDENCE.
Notified Name: WQCD-ANNE MARIE GOOLSBY, JENNIFER MILLER, DAVID KURZ, PAUL KOSIK, CAMERON WILKINS
Additional Comments:
Comments:
Cause Info: A BLOCKAGE CAUSED BY A BUILD UP OF ROOTS WITHIN A SANITARY SEWER LINE CAUSED A BACK UP OF WATEWATER TO IMPACT THE BASEMENT OF A PRIVATE RESIDENCE.
Action: BLOCKAGE WAS CLEARED AND THE LINE IS BACK IN SERVICE. SERVPRO WAS CONTACTED TO CLEANUP ALL IMPACTED AREAS.

Description of Incident: CALLER IS REPORTING THAT A TRANSFORMER IS LEAKING OIL FROM A FEEDER TUBE THAT GOES FROM THE TRANSFORMER TO A BUILDING AND IS POOLING UP OIL INSIDE OF THE BUILDING. THIS WAS DISCOVERED AT THE END OF JUNE BUT WAS UNABLE TO DETERMINE THE SOURCE AT THE TIME. XCEL ELECTRIC CAME OUT ON THE 17TH OF JULY AND IT WAS DETERMINED THAT THE OIL WAS COMING FROM THE TRANSFORMER. UNCERTAIN WHETHER SPILLED PRODUCT CONTAINS PCB'S

Additional Comments:	
Comments:	THE CDPHE SPILL LINE CONTACTED JENNIFER MCCARTER (303-227-4545) AT XCEL ENERGY. MCCARTER STATED IT
Cause Info:	Caller states a transformer is leaking oil from a feeder tube and pooling inside the building. They said Xcel electric came out on July 17th and confirmed the oil was coming from the transformer. Uncertain if spilled product contains PCBs.
Action:	Caller stated people in the building experiencing a "funny taste" on their lips and burning eyes.

Notified Name:	WQCD: Michelle Thiebaud, David Kurz, Kelly Jacques
Additional Comments:	
Comments:	NOT CONTACTED SINCE THEY HAD TAKEN CARE OF THIS FOR NOW
Cause Info:	Broomfield stormwater investigated complaints regarding the conditions in back of United Chinese Restaurant, and improper disposal and storage of old cooking oil and food waste. The investigator found oild grease stains from the recycling receptacles, iquid leaking from the trash dumpster, and overall poor conditions in back of the restaurant. The releases may have possibly impacted storm drains.
Action:	The investigator put floor dry donw on the liquid from the dumpster and will go back and clean up later today. They plan to monitor the area for illicit discharges.

Additional Comments:	
Comments:	
Cause Info:	Some type of equipment is thought to have leaked hydraulic fluid (unk reason) onto loading dock and into storm drain where it went both on the north and south sides of 120th. // Dennis Rodriguez from Broomfield Stormwater also reported this spill and said that booms and pads had prevented it from entering storm drains or water. His

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

contact below.

Action: North Metro Fire Dept was on scene at 11:30 and Veolia is also responding. North Metro put down absorbent pads. Clean up is ongoing on both the north and south sides of 120th.
